Abstract

This document details the design and the implementation of the fithesis3 document class. It contains technical information for anyone who wishes to extend the class with their locale or style files. Users who only wish to use the class are advised to consult the guides distributed along with the class, which only document the parts of the public API relevant to the given style files.

1 Required classes and packages

`\thesis@backend` The class requires the class specified in `\thesis@backend`, whose default value is `[a4paper]{rapport3}`. If a different base class is desired, it can be specified by redefining `\thesis@backend` prior to loading the fithesis3 class.

```
\ProvidesClass{fithesis3}[\thesis@version]
\ifx\thesis@backend\undefined
  \def\thesis@backend{[a4paper]{rapport3}}
\fi\expandafter\LoadClass\thesis@backend
```

The class also requires the following packages:

- keyval – Adds support for parsing comma-delimited lists of key-value pairs.
- etoolbox – Adds support for expanding code after the preamble using the `\AtPreamble` hook.
- ltxcmds – Implements several commands from the LaTeX kernel. Used for the `\ltx@ifpackageloaded` command, which – unlike its `\@ifpackageloaded` counterpart – can be used outside the preamble.
- ifxetex – Used to detect the XeTeX engine.
- ifluatex – Used to detect the LuaTeX engine.
- inputenc – Used to enable the input UTF-8 encoding. This package does not get loaded under the XeTeX and LuaTeX engines.

The hyperref package is also conditionally loaded during the expansion of the `\thesis@load` macro (see Section 3.1). Other packages may be required by the style files (see Section 3.6) you are using.

```
\RequirePackage{keyval}
\RequirePackage{etoolbox}
\RequirePackage{ltxcmds}
\RequirePackage{ifxetex}
\RequirePackage{ifluatex}
\ifxetex\else\ifluatex\else
  \RequirePackage[utf8]{inputenc}
\fi\fi
```

2 Public API

2.1 Options

Any `[`⟨*options*⟩`]` passed to the class will be handed down to the loaded style files. The supported options are therefore documented in the subsections of Section 3.6

dedicated to the respective style files. At the moment, all options are processed by the `style/mu/fithesis-base.sty` style file documented in Section 3.6.2.2.

2.2 The `\thesissetup` macro

`\thesissetup` The main public macro is the `\thesissetup{`⟨*keyvals*⟩`}` command, where *keyvals* is a comma-delimited list of key-value pairs as defined by the `keyval` package. This macro needs to be included prior to the beginning of a LaTeX document. When used, the *keyvals* are processed.

Note that the values passed to the `\thesissetup` public macro may only contain one paragraph of text. If you wish to set multiple paragraphs of text as the value, you need to use the `\thesislong` public macro (see Section 2.3).

```
\def\thesissetup#1{%
  \setkeys{thesis}{#1}}
```

2.2.1 The `basePath` key

`\thesis@basepath` The `{`⟨`basePath=`*path*⟩`}` pair sets the *path* containing the class files. The *path* is prepended to every other path (`\thesis@logopath`, `\thesis@stylepath` and `\thesis@localepath`) used by the class. If non-empty, the *path* gets normalized to *path/*. The normalized *path* is stored within the `\thesis@basepath` macro, whose implicit value is `fithesis/`.

```
\def\thesis@basepath{fithesis/}
\define@key{thesis}{basePath}{%
  \ifx\thesis@empty#1\thesis@empty%
    \def\thesis@basepath{}%
  \else%
    \def\thesis@basepath{#1/}%
  \fi}
```

`\thesis@logopath`

2.2.2 The `logoPath` key

The `{`⟨`logoPath=`*path*⟩`}` pair sets the *path* containing the logo files, which is used by the style files to load the university and faculty logos. The *path* is normalized using the `\thesis@subdir` macro and stored within the `\thesis@logopath` macro, whose implicit value is `\thesis@basepath` followed by `logo/\thesis@university/`. By default, this expands to `fithesis/logo/mu/`.

```
\def\thesis@logopath{\thesis@basepath logo/\thesis@university/}
\define@key{thesis}{logoPath}{%
  \def\thesis@logopath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@stylepath

2.2.3 The stylePath key

The {⟨stylePath=*path*⟩} pair sets the *path* containing the style files. The *path* is normalized using the \thesis@subdir macro and stored within the \thesis@stylepath macro, whose implicit value is \thesis@basepath style/. By default, this expands to fithesis/style/.

```
\def\thesis@stylepath{\thesis@basepath style/}
\define@key{thesis}{stylePath}{%
  \def\thesis@stylepath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@localepath

2.2.4 The localePath key

The {⟨localePath=*path*⟩} pair sets the *path* containing the locale files. The *path* is normalized using the \thesis@subdir macro and stored within the \thesis@localepath macro, whose implicit value is \thesis@basepath followed by locale/. By default, this expands to fithesis/locale/.

```
\def\thesis@localepath{\thesis@basepath locale/}
\define@key{thesis}{localePath}{%
  \def\thesis@localepath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@subdir

The \thesis@subdir macro returns / unchanged, coerces ., .., */path*, ./*path* and ../*path* to ./, ../, */path/*, ./*path/* and ../*path/*, respectively, and prefixes any other *path* with \thesis@basepath.

```
\def\thesis@subdir#1#2#3#4\empty{%
  \ifx#1\empty%           <empty> -> <basepath>
    \thesis@basepath
  \else
    \if#1/%
      \ifx#2\empty%             / -> /
        /%
      \else%              /<path> -> /<path>/
        #1#2#3#4/%
      \fi
    \else%
      \if#1.%
        \ifx#2\empty%           . -> ./
          ./%
        \else
          \if#2.%
            \ifx#3\empty%      .. -> ../
              ../%
            \else
              \if#3/%   ../<path> -> ../<path>/
                ../#4/%
              \else
                \thesis@basepath#1#2#3#4/%
```

```
            \fi
          \fi
        \else
          \if#2/%      ./<path> -> ./<path>/
            ./#3#4/%
          \else
            \thesis@basepath#1#2#3#4/%
          \fi
        \fi
      \fi
    \else
      \thesis@basepath#1#2#3#4/%
    \fi
  \fi%
\fi}
```

`\thesis@def` The `\thesis@def[⟨key⟩]{⟨name⟩}` macro defines the `\thesis@`*name* macro to expand to either «*key*», if specified, or to «*name*». The macro serves to provide placeholder strings for macros with no default value.

```
\newcommand{\thesis@def}[2][]{%
  \expandafter\def\csname thesis@#2\endcsname{%
    <<\ifx\thesis@empty#1\thesis@empty#2\else#1\fi>>}}
```

`\thesis@declaration`

2.2.5 The `declaration` key

The {⟨`declaration`=*text*⟩} pair sets the declaration *text* to be included into the document. The *text* is stored within the `\thesis@declaration` macro, whose implicit value is `\thesis@@{declaration}`.

```
\def\thesis@declaration{\thesis@@{declaration}}
\long\def\KV@thesis@declaration#1{%
  \long\def\thesis@declaration{#1}}
```

`\ifthesis@woman`

2.2.6 The `gender` key

The {⟨`gender`=*char*⟩} pair sets the author's gender to either a male, if *char* is the character `m`, or to a female. The gender can be tested using the `\ifthesis@woman` ... `\else` ... `\fi` conditional. The implicit gender is male.

```
\newif\ifthesis@woman\thesis@womanfalse
\define@key{thesis}{gender}{%
  \def\thesis@male{m}%
  \def\thesis@arg{#1}%
  \ifx\thesis@male\thesis@arg%
    \thesis@womanfalse%
  \else%
    \thesis@womantrue%
  \fi}
```

\thesis@author

2.2.7 The author key

The {⟨author=*name*⟩} pair sets the author's full name to *name*. The *name* is parsed
\thesis@parseAuthor using the \thesis@parseAuthor macro and stored within the following macros:

\thesis@author
- \thesis@author – The full name of the author.

\thesis@author@head
- \thesis@author@head – The first space-delimited part of the name. This corresponds to the author's first name.

\thesis@author@tail
- \thesis@author@tail – The full name without the first space-delimited part of the name. This corresponds to the author's surname.

\author The standard LaTeX \author macro also sets this key.

```
\def\thesis@parseAuthor#1{%
  \def\thesis@author{#1}%
  \def\thesis@author@head{\expandafter\expandafter\expandafter%
    \@gobble\thesis@head#1 \relax}%
  \def\thesis@author@tail{\thesis@tail#1 \relax}}
\thesis@def{author}%
\thesis@def[author]{author@head}%
\thesis@def[author]{author@tail}%
\define@key{thesis}{author}{%
  \thesis@parseAuthor{#1}}
\let\author\thesis@parseAuthor
```

\thesis@id

2.2.8 The id key

The {⟨id=*identifier*⟩} pair sets the identifier of the thesis author to *identifier*. This usually corresponds to the unique identifier of the author within the information system of the given university.

```
\thesis@def{id}
\define@key{thesis}{id}{%
  \def\thesis@id{#1}}
```

\thesis@type

2.2.9 The type key

The {⟨type=*type*⟩} pair sets the type of the thesis to *type*. The following types of theses are recognized:

The thesis type	The value of *type*
Bachelor's thesis	bc
Master's thesis	mgr
Doctoral thesis	d
Rigorous thesis	r

The *type* is stored within the `\thesis@type` macro, whose implicit value is `bc`. For the ease of testing of the thesis type via `\ifx` conditions within style and locale files, the `\thesis@bachelors`, `\thesis@masters`, `\thesis@doctoral` and `\thesis@rigorous` macros containing the corresponding *type* values are available as a part of the private API.

`\thesis@bachelors` `\thesis@masters` `\thesis@rigorous` `\thesis@doctoral`

```
\def\thesis@bachelors{bc}
\def\thesis@masters{mgr}
\def\thesis@doctoral{d}
\def\thesis@rigorous{r}
\let\thesis@type\thesis@bachelors
\define@key{thesis}{type}{%
  \def\thesis@type{#1}}
```

`\thesis@university`

2.2.10 The `university` key

The {⟨`university`=*identifier*⟩} pair sets the identifier of the university, at which the thesis is being written, to *identifier*. The *identifier* is stored within the `\thesis@university` macro, whose implicit value is `mu`. This value corresponds to the Masaryk University in Brno.

```
\def\thesis@university{mu}
\define@key{thesis}{university}{%
  \def\thesis@university{#1}}
```

`\thesis@faculty`

2.2.11 The `faculty` key

The {⟨`faculty`=*identifier*⟩} pair sets the faculty, at which the thesis is being written, to *domain*. The following faculty *identifier*s are recognized at the Masaryk University in Brno:

The faculty	The *domain* name
The Faculty of Informatics	`fi`
The Faculty of Science	`sci`
The Faculty of Law	`law`
The Faculty of Economics and Administration	`econ`
The Faculty of Social Studies	`fss`
The Faculty of Medicine	`med`
The Faculty of Education	`ped`
The Faculty of Arts	`phil`
The Faculty of Sports Studies	`fsps`

The *identifier* is stored within the `\thesis@faculty` macro, whose implicit value is `fi`.

```
\def\thesis@faculty{fi}
\define@key{thesis}{faculty}{%
  \def\thesis@faculty{#1}}
```

\thesis@department

2.2.12 The `department` key

The {⟨`department`=*name*⟩} pair sets the name of the department, at which the thesis is being written, to *name*. Unlike the university and faculty identifiers, the department *name* is only used for typesetting and it should therefore be specified in plain language with optional TEX macros. The *name* is stored within the `\thesis@department` macro.

```
\thesis@def{department}
\define@key{thesis}{department}{%
  \def\thesis@department{#1}}
```

\thesis@departmentEn

2.2.13 The `departmentEn` key

The {⟨`departmentEn`=*name*⟩} pair sets the English name of the department, at which the thesis is being written, to *name*. The *name* is stored within the `\thesis@departmentEn` macro.

```
\thesis@def{departmentEn}
\define@key{thesis}{departmentEn}{%
  \def\thesis@departmentEn{#1}}
```

\thesis@programme

2.2.14 The `programme` key

The {⟨`programme`=*name*⟩} pair sets the name of the author's study programme to *name*. Unlike the university and faculty identifiers, the programme *name* is only used for typesetting and it should therefore be specified in plain language with optional TEX macros. The *name* is stored within the `\thesis@programme` macro.

```
\thesis@def{programme}
\define@key{thesis}{programme}{%
  \def\thesis@programme{#1}}
```

\thesis@programmeEn

2.2.15 The `programmeEn` key

The {⟨`programmeEn`=*name*⟩} pair sets the English name of the author's study programme to *name*. The *name* is stored within the `\thesis@programmeEn` macro.

```
\thesis@def{programmeEn}
\define@key{thesis}{programmeEn}{%
  \def\thesis@programmeEn{#1}}
```

\thesis@field

2.2.16 The `field` key

The {⟨`field`=*name*⟩} pair sets the name of the author's field of study to *name*. Unlike the university and faculty identifiers, the *name* of the field of study is only used for typesetting and it should therefore be specified in plain language with optional TEX macros. The *name* is stored within the `\thesis@field` macro.

```
\thesis@def{field}
\define@key{thesis}{field}{%
  \def\thesis@field{#1}}
```

\thesis@fieldEn

2.2.17 The `fieldEn` key

The {⟨`fieldEn`=*name*⟩} pair sets the English name of the author's field of stufy to *name*. The *name* is stored within the `\thesis@fieldEn` macro.

```
\thesis@def{fieldEn}
\define@key{thesis}{fieldEn}{%
  \def\thesis@fieldEn{#1}}
```

\thesis@universityLogo

2.2.18 The `universityLogo` key

The {⟨`universityLogo`=*filename*⟩} pair sets the filename of the logo file to be used as the university logo to *filename*. The *filename* is stored within the `\thesis@universityLogo` macro, whose implicit value is `fithesis-base`. The `fithesis-` prefix serves to prevent package clashes with other similarly named files within the TEX directory structure. The logo file is loaded from the `\thesis@logopath\thesis@universityLogo` path.

```
\def\thesis@universityLogo{fithesis-base}
\define@key{thesis}{universityLogo}{%
  \def\thesis@universityLogo{#1}}
```

\thesis@facultyLogo

2.2.19 The `facultyLogo` key

The {⟨`facultyLogo`=*filename*⟩} pair sets the filename of the logo file to be used as the faculty logo to *filename*. The *filename* is stored within the `\thesis@facultyLogo` macro, whose implicit value is `fithesis-\thesis@faculty`. The `fithesis-` prefix serves to prevent package clashes with other similarly named files within the TEX directory structure. The logo file is loaded from the `\thesis@logopath\thesis@facultyLogo` path.

```
\def\thesis@facultyLogo{fithesis-\thesis@faculty}
\define@key{thesis}{facultyLogo}{%
  \def\thesis@facultyLogo{#1}}
```

\thesis@style

2.2.20 The `style` key

The {⟨`style`=*filename*⟩} pair sets the filename of the style file to be used to *filename*. The *filename* is stored within the `\thesis@style` macro, whose implicit value is `\thesis@university/fithesis-\thesis@faculty`. When the *filename* is an empty token string, no style files will be loaded during the main routine (see Section 3.1).

```
\def\thesis@style{\thesis@university/fithesis-\thesis@faculty}
\define@key{thesis}{style}{%
  \def\thesis@style{#1}}
```

\thesis@style@inheritance

2.2.21 The `styleInheritance` key

The {⟨`styleInheritance`=*bool*⟩} pair either enables, if *bool* is `true` or unspecified, or disables the inheritance for style files. The setting affects the function of the `\thesis@requireStyle` macro (see Section 3.2) and can be tested using the `\ifthesis@style@inheritance` ... `\else` ... `\fi` conditional. Inheritance is enabled for style files by default.

```
\newif\ifthesis@style@inheritance\thesis@style@inheritancetrue
\define@key{thesis}{styleInheritance}[true]{%
  \begingroup
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg
    \endgroup\thesis@style@inheritancetrue
  \else
    \endgroup\thesis@style@inheritancefalse
  \fi}
```

\thesis@locale

2.2.22 The `locale` key

The {⟨`locale`=*name*⟩} pair sets the name of the main locale to *name*. The *name* is stored within the `\thesis@locale` macro, whose implicit value is the main language of either the babel or the polyglossia package, or `english`, when undefined. When the *name* is an empty token string, no locale files will be loaded during the main routine (see Section 3.1).

```
\def\thesis@locale{%
  % Babel / polyglossia detection
  \ifx\languagename\undefined%
  english\else\languagename\fi}
\define@key{thesis}{locale}{%
  \def\thesis@locale{#1}}
```

\ifthesis@english

The English locale is special. Several parts of the document will typically be typeset in both the current locale and English. However, if the current locale is English, this would result in duplicity. To avoid this, the `\ifthesis@english` ... `\else` ... `\fi` conditional is made available for testing, whether or not the current locale is English.

```
\def\ifthesis@english{
  \expandafter\def\expandafter\@english\expandafter{\string%
  \english}%
  \expandafter\expandafter\expandafter\def\expandafter%
  \expandafter\expandafter\@locale\expandafter\expandafter%
  \expandafter{\expandafter\string\csname\thesis@locale\endcsname}%
  \expandafter\csname\expandafter i\expandafter f\ifx\@locale%
  \@english%
    true%
  \else%
```

```
    false%
\fi\endcsname}
```

\thesis@locale@inheritance

2.2.23 The `localeInheritance` key

The {⟨`localeInheritance`=*bool*⟩} pair either enables, if *bool* is `true` or unspecified, or disables the inheritance. The setting affects the function of the `\thesis@requireLocale` macro (see Section 3.2) and can be tested using the `\ifthesis@locale@inheritance` ... `\else` ... `\fi` conditional. Inheritance is enabled for locale files by default.

```
\newif\ifthesis@locale@inheritance\thesis@locale@inheritancetrue
\define@key{thesis}{localeInheritance}[true]{%
  \begingroup
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg
    \endgroup\thesis@locale@inheritancetrue
  \else
    \endgroup\thesis@locale@inheritancefalse
  \fi}
```

2.2.24 The `date` key

The {⟨`date`=*date*⟩} pair sets the date of the thesis submission to *date*, where *date* is a string in the `YYYY/MM/DD` format, where `YYYY` stands for full year, `MM` stands for month and `DD` stands for day. The *date* is parsed and stored using the `\thesis@parseDate` macro within the following macros:

\thesis@parseDate

\thesis@date

- `\thesis@date` – The entire *date*

\thesis@year

- `\thesis@year` – The `YYYY` part of *date*

\thesis@month

- `\thesis@month` – The `MM` part of *date*

\thesis@day

- `\thesis@day` – The `DD` part of *date*

\thesis@season

- `\thesis@season` – Expands to either:
  - `spring` if $2 < \texttt{MM} < 9$,
  - `fall` if $\texttt{MM} \leq 2$ or $\texttt{MM} \geq 9$.

\thesis@academicYear

- `\thesis@academicYear` – The academic year of the given semester:
  - $\texttt{YYYY} - 1/\texttt{YYYY}$ if $\texttt{MM} < 9$.
  - $\texttt{YYYY/YYYY} + 1$ if $\texttt{MM} \geq 9$

To set up the default values, the \thesis@parseDate macro is called with the fully expanded \the\year/\the\month/\the\day string, which equals the current date.

```
\def\thesis@parseDate#1/#2/#3|{{
  % Set the basic macros

\expandafter\thesis@parseDate\thesis@date|%

\define@key{thesis}{date}{{%
  \edef\@date{#1}%
  \expandafter\thesis@parseDate\@date|}}
```

\thesis@place

2.2.25 The `place` key

The {⟨`place`=*place*⟩} pair sets the location of the faculty, at which the thesis is being prepared, to *place*. The *place* is stored within the \thesis@place macro, whose implicit value is `Brno`.

```
\def\thesis@place{Brno}
\define@key{thesis}{place}{%
  \def\thesis@place{#1}}
```

\thesis@title

2.2.26 The `title` key

The {⟨`title`=*title*⟩} pair sets the title of the thesis to *title*. The *title* is stored within the \thesis@title macro. The standard LaTeX \title macro also sets this key.

\title

```
\thesis@def{title}
\define@key{thesis}{title}{%
  \def\thesis@title{#1}}
\def\title#1{\def\thesis@title{#1}}
```

\maketitle The standard LaTeX `\maketitle` macro is defined, but disabled.

```
\let\maketitle\relax
```

\thesis@TeXtitle

2.2.27 The `TeXtitle` key

The {⟨`TeXtitle`=*title*⟩} pair sets the TeX title of the thesis to *title*. The *title* is used, when typesetting the title, whereas `\thesis@title` is a plain text, which gets included in the PDF header of the resulting document. The *title* is stored within the `\thesis@TeXtitle` macro, whose implicit value is `\thesis@title`.

```
\def\thesis@TeXtitle{\thesis@title}
\define@key{thesis}{TeXtitle}{%
  \def\thesis@TeXtitle{#1}}
```

\thesis@titleEn

2.2.28 The `titleEn` key

The {⟨`titleEn`=*title*⟩} pair sets the English title of the thesis to *title*. The *title* is stored within the `\thesis@titleEn` macro.

```
\thesis@def{titleEn}
\define@key{thesis}{titleEn}{%
  \def\thesis@titleEn{#1}}
```

\thesis@TeXtitleEn

2.2.29 The `TeXtitleEn` key

The *title* is used, when typesetting the title, whereas `\thesis@titleEn` is a plain text, which gets included in the PDF header of the resulting document. The *title* is stored within the `\thesis@TeXtitleEn` macro, whose implicit value is `\thesis@titleEn`.

```
\def\thesis@TeXtitleEn{\thesis@titleEn}
\define@key{thesis}{TeXtitleEn}{%
  \def\thesis@TeXtitleEn{#1}}
```

\thesis@keywords

2.2.30 The `keywords` key

The {⟨`keywords`=*list*⟩} pair sets the keywords of the thesis to the comma-delimited *list*. The *list* is stored within the `\thesis@keywords` macro.

```
\thesis@def{keywords}
\define@key{thesis}{keywords}{%
  \def\thesis@keywords{#1}}
```

\thesis@TeXkeywords

2.2.31 The TeXkeywords key

The {⟨TeXkeywords=*list*⟩} pair sets the TEX keywords of the thesis to the comma-delimited *list*. The *list* is used, when typesetting the keywords, whereas \thesis@keywords is a plain text, which gets included in the PDF header of the resulting document. The *list* is stored within the \thesis@TeXkeywords macro.

```
\def\thesis@TeXkeywords{\thesis@keywords}
\define@key{thesis}{TeXkeywords}{%
  \def\thesis@TeXkeywords{#1}}
```

\thesis@keywordsEn

2.2.32 The keywordsEn key

The {⟨keywordsEn=*list*⟩} pair sets the English keywords of the thesis to the comma-delimited *list*. The *list* is stored within the \thesis@keywordsEn macro.

```
\thesis@def{keywordsEn}
\define@key{thesis}{keywordsEn}{%
  \def\thesis@keywordsEn{#1}}
```

\thesis@TeXkeywordsEn

2.2.33 The TeXkeywordsEn key

The {⟨TeXkeywordsEn=*list*⟩} pair sets the English TEX keywords of the thesis to the comma-delimited *list*. The *list* is used, when typesetting the keywords, whereas \thesis@keywordsEn is a plain text, which gets included in the PDF header of the resulting document. The *list* is stored within the \thesis@TeXkeywordsEn macro.

```
\def\thesis@TeXkeywordsEn{\thesis@keywordsEn}
\define@key{thesis}{TeXkeywordsEn}{%
  \def\thesis@TeXkeywordsEn{#1}}
```

\thesis@abstract

2.2.34 The abstract key

The {⟨abstract=*text*⟩} pair sets the abstract of the thesis to *text*. The *text* is stored within the \thesis@abstract macro.

```
\thesis@def{abstract}
\long\def\KV@thesis@abstract#1{%
  \long\def\thesis@abstract{#1}}
```

\thesis@abstractEn

2.2.35 The abstractEn key

The {⟨abstractEn=*text*⟩} pair sets the English abstract of the thesis to *text*. The *text* is stored within the \thesis@abstractEn macro.

```
\thesis@def{abstractEn}
\long\def\KV@thesis@abstractEn#1{%
  \long\def\thesis@abstractEn{#1}}
```

\thesis@advisor

2.2.37 The `thanks` key

The {⟨`thanks`=*text*⟩} pair sets the acknowledgement text to *text*. The *text* is stored within the `\thesis@thanks` macro.

```
\long\def\KV@thesis@thanks#1{%

```

\thesis@assignmentFiles

2.2.38 The `assignment` key

The {⟨`assignment`=*list*⟩} pair sets the comma-delimited list of paths to the PDF files containing the thesis assignment to *list*. The *list* is stored within the `\thesis@assignmentFiles` macro.

```
\define@key{thesis}{assignment}{%
  \def\thesis@assignmentFiles{#1}}
```

\ifthesis@auto

2.2.39 The `autoLayout` key

The {⟨`autoLayout`=*bool*⟩} pair either enables, if *bool* is `true` or unspecified, or disables autolayout. Autolayout injects the `\thesis@preamble` and `\thesis@postamble` macros at the beginning and at the end of the document, respectively. The setting can be tested using the `\ifthesis@auto` ... `\else` ... `\fi` conditional. The autolayout is enabled by default.

```
\newif\ifthesis@auto\thesis@autotrue
\define@key{thesis}{autoLayout}[true]{%
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg%
    \thesis@autotrue%
  \else%
    \thesis@autofalse%
  \fi}
```

\thesis@preamble
\thesis@postamble
\thesis@blocks@preamble
\thesis@blocks@postamble

The `\thesis@preamble` and `\thesis@postamble` macros temporarily switch to the hyphenation patterns and the `csquotes` style of the main locale and typeset the contents of the `\thesis@blocks@preamble` or `\thesis@blocks@postamble` macros, respectively.

Before leaving the group, the `\thesis@preamble` macro clears the page. After leaving the group, the `\thesis@preamble` macro sets up the style of the main matter

\thesis@blocks@mainMatter by expanding the \thesis@blocks@mainMatter macro. All the aforementioned @block@ macros are defined as \relax and are subject to redefinition by the loaded style files.

```
\def\thesis@preamble{%
  {\thesis@selectLocale{\thesis@locale}%
  \thesis@blocks@preamble\clearpage}
  \thesis@blocks@mainMatter}

\def\thesis@postamble{{%
  \thesis@selectLocale{\thesis@locale}%
  \thesis@blocks@postamble}}

\let\thesis@blocks@preamble\relax
\let\thesis@blocks@postamble\relax
\let\thesis@blocks@mainMatter\relax
```

2.3 The \thesislong macro

\thesislong The public macro \thesislong{⟨*key*⟩}{⟨*value*⟩}, where *value* may contain multiple paragraphs of text, can be used as an alternative to the \thesissetup public macro, which only permits a single paragraph as the *value*, for the following *key*s:

- abstract
- abstractEn
- thanks
- declaration

```
\long\def\thesislong#1#2{%
  \csname KV@thesis@#1\endcsname{#2}}
```

3 Private API

3.1 Main routine

\thesis@load The \thesis@load macro is responsible for preparing the environment for, and consequently loading, the necessary locale and style files. By default, the \thesis@load macro gets expanded at the end of the preamble, but it can be expanded manually prior to that point, if necessary to prevent package clashes.

\ifthesis@loaded The \ifthesis@loaded semaphore ensures that the expansion is only performed once.

```
\newif\ifthesis@loaded\thesis@loadedfalse
\AtEndPreamble{\thesis@load}
\def\thesis@load{%
  \ifthesis@loaded\else%
    \thesis@loadedtrue
    \makeatletter%
```

First, the main locale file is loaded using the \thesis@requireLocale macro. If the user specified an explicit empty string as the value of \thesis@locale, do nothing.

```
    \ifx\thesis@locale\empty\else
      \thesis@requireLocale{\thesis@locale}
    \fi
```

Consequently, the style files are loaded. If the user specified an explicit empty string as the value of `\thesis@style`, do nothing.

```
    \ifx\thesis@style\empty\else
      \thesis@requireStyle{\thesis@style}
    \fi
```

With the placeholder strings loaded from the locale files, we can now inject metadata into the resulting PDF file. To this end, the hyperref package is conditionally included with the `unicode` option. Consequently, the following values are assigned to the PDF headers:

- `Title` is set to `\thesis@title`.
- `Author` is set to `\thesis@author`.
- `Keywords` is set to `\thesis@keywords`.
- `Creator` is set to `2015/11/30 v0.3.27 fithesis3 MU thesis class`.

```
    \thesis@require{hyperref}
    \hypersetup{
      unicode=true,
      pdfencoding=auto,
      pdftitle=\thesis@title,
      pdfauthor=\thesis@author,
      pdfkeywords=\thesis@keywords,
      pdfcreator=\thesis@version}
```

If autolayout is enabled, the `\thesis@preamble` and `\thesis@postamble` macros are scheduled for expansion at the beginning and at the end of the document, respectively.

```
    \ifthesis@auto
      \AtBeginDocument{\thesis@preamble}
      \AtEndDocument{\thesis@postamble}
    \fi
  \makeatother
\fi}
```

3.2 File manipulation macros

`\thesis@exists` The `\thesis@exists{`⟨*file*⟩`}{`⟨*tokens*⟩`}` macro is used to test for the existence of a given *file*. If the *file* exists, the macro expands to *tokens*. Otherwise, a class warning is written to the output.

```
\def\thesis@exists#1#2{%
  \IfFileExists{#1}{#2}{%
  \ClassWarning{fithesis3}{File #1 doesn't exist}}}
```

`\thesis@input` The `\thesis@input{`⟨*file*⟩`}` macro inputs the given *file*, if it exists.

```
\def\thesis@input#1{%
  \thesis@exists{#1}{\input{#1}}}
```

`\thesis@require` The `\thesis@require {`⟨*package*⟩`}` expands to `\RequirePackage{`⟨*package*⟩`}`, if the specified *package* has not yet been loaded.

```
\def\thesis@require#1{%
  \@ifpackageloaded{#1}{}{\RequirePackage{#1}}}
```

`\thesis@requireWithOptions` The `\thesis@requireWithOptions{`⟨*package*⟩`}` expands to `\RequirePackageWithOptions{`⟨*package*⟩`}`, if the specified *package* exists and has not yet been loaded.

```
\def\thesis@requireWithOptions#1{\thesis@exists{#1.sty}{%
  \@ifpackageloaded{#1}{}{\RequirePackageWithOptions{#1}}}}
```

`\thesis@requireStyle` If inheritance is enabled for style files, then the `\thesis@requireStyle{`⟨*style*⟩`}` macro sequentially loads each of the following files, provided they exist:

1. `\thesis@stylepath fithesis-base.sty`
2. `\thesis@stylepath\thesis@university/fithesis-base.sty`
3. `\thesis@stylepath` *style*`.sty`

If inheritance is disabled for style files, then only the last listed file is loaded. The `fithesis-` prefix serves to prevent package clashes with other similarly named package files within the TEX directory structure.

```
\def\thesis@requireStyle#1{%
  \ifthesis@style@inheritance%
    \thesis@requireWithOptions{\thesis@stylepath fithesis-base}%
    \thesis@requireWithOptions{\thesis@stylepath\thesis@university%
      /fithesis-base}
  \fi%
  \thesis@requireWithOptions{\thesis@stylepath#1}}
```

`\thesis@requireLocale` If inheritance is enabled for style files, then the `\thesis@requireLocale{`⟨*locale*⟩`}` macro sequentially loads each of the following locale files, provided they exist:

1. `\thesis@localepath fithesis-`*locale*`.def`
2. `\thesis@localepath\thesis@university/fithesis-`*locale*`.def`
3. `\thesis@localepath\thesis@university/\thesis@faculty/fithesis-`*locale*`.def`

If inheritance is disabled for locale files, then only the first listed file is loaded. The `fithesis-` prefix serves to prevent clashes with other similarly named files within the TEX directory structure. To prevent undesirable side effects from locale files being loaded multiple times, the `\thesis@`*locale*`@required` macro is defined as a flag, which prevents future invocations with the same *locale*. The macro can be used within both locale and style files, although the usage within locale files is strongly discouraged to prevent circular dependencies.

If the polyglossia package is being used, its definitions for the respective locale get loaded as well. As a consequence, this command may not be used within the document, but only in the preamble.

```
\def\thesis@requireLocale#1{%
  % Ignore redundant requests
  \expandafter\ifx\csname thesis@#1@required\endcsname\relax%
    \expandafter\def\csname thesis@#1@required\endcsname{}%
    \@ifpackageloaded{polyglossia}{\setotherlanguage{#1}}{}
    \thesis@input{\thesis@localepath fithesis-#1.def}%
    \ifthesis@locale@inheritance%
      \thesis@input{\thesis@localepath\thesis@university/%
        fithesis-#1.def}%
      \thesis@input{\thesis@localepath\thesis@university/%
        \thesis@faculty/fithesis-#1.def}%
    \fi
  \fi}
```

3.3 String manipulation macros

`\thesis@` The `\thesis@{`⟨*name*⟩`}` macro expands to `\thesis@`*name*, where *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@#1{\csname thesis@#1\endcsname}
```

`\thesis@@` The `\thesis@@{`⟨*name*⟩`}` macro expands to `\thesis@`*locale*`@`*name*, where *locale* corresponds to the name of the current locale. The *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@@#1{\thesis@{\thesis@locale @#1}}
```

`\thesis@lower` `\thesis@upper` The `\thesis@lower` and `\thesis@upper` macros are used for upper- and lowercasing within locale files. To cast the `\thesis@`*name* macro to the lower- or uppercase, `\thesis@lower{`*name*`}` or `\thesis@upper{`*name*`}` would be used, respectively. The *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@lower#1{{%
  \let\ea\expandafter%
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\lowercase\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea{\ea\ea\ea\ea\ea\ea\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\@gobble\ea\ea\ea\string\ea\csname\csname the%
  sis@#1\endcsname\endcsname}}}
\def\thesis@upper#1{{%
  \let\ea\expandafter%
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\uppercase\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea{\ea\ea\ea\ea\ea\ea\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\@gobble\ea\ea\ea\string\ea\csname\csname the%
  sis@#1\endcsname\endcsname}}}
```

`\thesis@@lower` `\thesis@@upper` The `\thesis@@lower` and `\thesis@@upper` macros are used for upper- and lowercasing current *locale* strings within style files. To cast the `\thesis@`*locale*`@`*name*

macro to the lower- or uppercase, `\thesis@@lower{`*name*`}` or `\thesis@@upper{`*name*`}` would be used, respectively. The *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@@lower#1{\thesis@lower{\thesis@locale @#1}}
\def\thesis@@upper#1{\thesis@upper{\thesis@locale @#1}}
```

`\thesis@head` `\thesis@tail` The `\thesis@head` and `\thesis@tail` macros are used for retrieving the head or the tail of space-separated token sequences that end with `\relax`.

```
\def\thesis@head#1 #2{%
  \ifx\relax#2%
    \expandafter\@gobbletwo%
  \else%
    \ #1%
  \fi%
  \thesis@head#2}%
\def\thesis@tail#1 #2{%
  \ifx\relax#2%
    #1%
    \expandafter\@gobbletwo%
  \fi%
  \thesis@tail#2}%
```

3.4 General purpose macros

`\thesis@pages` The `\thesis@pages` macro contains the total number of pages within the document. During the first TEX compilation, the macro expands to ??.

```
\AtEndDocument{\write\@auxout{\noexpand\gdef\noexpand\thesis@pages{\thepage}}}
\ifx\thesis@pages\undefined\def\thesis@pages{??}\fi
```

`\thesis@selectLocale` `\thesis@selectLocale{`⟨*locale*⟩`}` macro redefines the `\thesis@locale` macro to *locale*, switches to the hyphenation patterns of *locale*, and starts using the `\thesis@`*locale*`@csquotesStyle` style of the csquotes package. The respective locale files and polyglossia locale definitions should be loaded beforehand using the `\thesis@requireLocale` macro.

This macro should always be used within a group, so that the locale, csquotes, and hyphenation settings return back to what the user has specified after the localized blocks of typographic material.

If not loaded by the user, the csquotes package gets loaded at the end of the preamble.

```
\AtEndPreamble{\thesis@require{csquotes}}
\def\thesis@selectLocale#1{%
  \edef\thesis@locale{#1}%
  \csq@setstyle{\thesis@@{csquotesStyle}}%
  \ltx@ifpackageloaded{polyglossia}{%
    \selectlanguage{\thesis@locale}
  }{%
    \language\csname l@\thesis@locale\endcsname
  }}
```

3.5 Locale files

Locale files contain macro definitions for various locales. They live in the `locale/` subtree and they are loaded during the main routine (see Section 3.1).

When creating a new locale file, it is advisable to create one self-contained `dtx` file, which is then partitioned into locale files via the `docstrip` tool based on the respective `ins` file. A macro `\file{`⟨*filename*⟩`}` is available for the sectioning of the documentation of various files within the `dtx` file. For more information about `dtx` files and the `docstrip` tool, consult the `dtxtut`, `docstrip`, `doc` and `ltxdoc` manuals.

`\file`

Mind that the name of the locale is also used to load hyphenation patterns, which is why it shouldn't be arbitrary. To see the names of the hyphenation patterns, consult the `hyph-utf8` manual.

3.5.1 Interface

The union of locale files loaded via the locale file inheritance scheme (see the definition of the `\thesis@requireLocale` macro in Section 3.2) needs to globally define the following macros:

- `\thesis@`*locale*`@csquotesStyle` – The name of the style of the `csquotes` package that matches this locale
- `\thesis@`*locale*`@universityName` – The name of the university
- `\thesis@`*locale*`@facultyName` – The name of the faculty
- `\thesis@`*locale*`@assignment` – The instructions to replace the current page with the official thesis assignment
- `\thesis@`*locale*`@declaration` – The thesis declaration text
- `\thesis@`*locale*`@fieldTitle` – The title of the field of study entry
- `\thesis@`*locale*`@advisorTitle` – The title of the advisor entry
- `\thesis@`*locale*`@authorTitle` – The title of the author entry
- `\thesis@`*locale*`@abstractTitle` – The title of the abstract section
- `\thesis@`*locale*`@keywordsTitle` – The title of the keywords section
- `\thesis@`*locale*`@thanksTitle` – The title of the acknowledgement section
- `\thesis@`*locale*`@declarationTitle` – The title of the declaration section
- `\thesis@`*locale*`@idTitle` – The title of the thesis author's identifier field
- `\thesis@`*locale*`@spring` – The name of the spring semester
- `\thesis@`*locale*`@fall` – The name of the fall semester
- `\thesis@`*locale*`@semester` – The full name of the current semester
- `\thesis@`*locale*`@typeName` – The name of the thesis type

where *locale* is the name of the locale.

3.5.2 English locale files

3.5.2.1 The `locale/fithesis-english.def` file

This is the base file of the English locale.

```
\ProvidesFile{fithesis/locale/fithesis-english.def}[2015/11/29]
```

The locale file defines all the private macros mandated by the locale file interface.

```

3.5.2.2 The `locale/mu/fithesis-english.def` file

This is the English locale file specific to the Masaryk University in Brno. It replaces the `universityName` placeholder with the correct value and defines the `declaration` and `idTitle` strings.

3.5.4.9 The `locale/mu/phil/fithesis-slovak.def` file

This is the Slovak locale file specific to the Faculty of Arts at the Masaryk University in Brno. It replaces the `facultyName` placeholder with the correct value. It also defines the `declaration` string and redefines the `typeName` and `typeName@akuzativ` strings in accordance with the requirements of the faculty.

3.6 Style files

Style files define the structure and the look of the resulting document. They live in the `style/` subtree and they are loaded during the main routine (see Section 3.1).

When creating a new style file, it is advisable to create one self-contained `dtx` file, which can contain several files to be extracted via the `docstrip` tool based on the respective `ins` file. A macro `\file{`⟨*filename*⟩`}` is available for the sectioning of the documentation of various files within the `dtx` file. For more information about `dtx` files and the `docstrip` tool, consult the `dtxtut`, `docstrip`, `doc` and `ltxdoc` manuals.

`\file`

3.6.1 Interface

The union of style files loaded via the style file inheritance scheme (see the definition of the `\thesis@requireStyle` macro in Section 3.2) should globally define at least one of the following macros:

`\thesis@blocks@preamble`

- `\thesis@blocks@preamble` – If autolayout is enabled, then this macro is expanded at the very beginning of the document.

\thesis@blocks@postamble

- \thesis@blocks@postamble – If autolayout is enabled, then this macro is expanded at the very end of the document.

\thesis@blocks@mainMatter

- \thesis@blocks@mainMatter – If autolayout is enabled, then this macro is expanded at the beginning of the document right after \thesis@blocks@preamble. This macro sets the style of the main matter of the thesis.

3.6.2 Base style files

3.6.2.1 The style/fithesis-base.sty file

If inheritance is enabled for style files, then this file is always the first style file to be loaded, regardless of the value of the \thesis@style macro. This style file is currently a dummy file.

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis/style/fithesis-base}[2015/06/23]
```

3.6.2.2 The style/mu/fithesis-base.sty file

This is the base style file for theses written at the Masaryk University in Brno. When inheritance is enabled for style files, this file is always the second style file to be loaded right after style/fithesis-base.sty, regardless of the value of the \thesis@style macro.

```
\ProvidesPackage{fithesis/style/mu/fithesis-base}[2015/11/17]
\NeedsTeXFormat{LaTeX2e}
```

The file recognizes the following options:

- 10pt, 11pt, 12pt – Sets the type size to 10, 11 or 12 points respectively.
- oneside, twoside – The document is going to be either single- or double-sided, respectively. In a double-sided document, headers, page numbering, margin notes and several other elements will be arranged based on the parity of the page. Blank pages will also be inserted prior the beginning of each chapter to ensure that it starts on a right-hand (odd-numbered) page. The \ifthesis@twoside@ \ifthesis@twoside@ conditional is set to either false or true, respectively.
- onecolumn, twocolumn – The document is going to be set in either a single column or in two columns, respectively.
- draft, final – Overful lines either are or aren't marked within the document, respectively, and graphics either aren't or are inserted into the document, respectively.
- palatino, nopalatino – The roman text font family and the math font family is going to be either set to Palatino or left untouched, respectively. The \ifthesis@palatino@ \ifthesis@palatino@ conditional is set to either true or false, respectively. The Palatino font is a part of the visual identity of the Faculty of Informatics at which the document class was created.

\ifthesis@color@

- `color`, `monochrome` – Certain typographical elements either are or aren't going to be typeset in color, respectively. The `\ifthesis@color@` conditional is set to either `true` or `false`, respectively.

\ifthesis@microtype@

- `microtype`, `nomicrotype` – The microtypographic extension of modern TEX engines – such as pdfTEX, XƎTEX, or LuaTEX – is or isn't going to be enabled, respectively. The `\ifthesis@microtype@` conditional is set to either `true` or `false`, respectively.

\ifthesis@newtable@

- `table`, `oldtable` – If the `\ifthesis@color@` conditional is `true`, then the definitions of the `tabular`, `tabularx`, and `tabu` commands either are or aren't going to be altered to better match the style, respectively. The `\ifthesis@newtable@` conditional is set to either `true` or `false`, respectively.

  The choice of the option name is deliberate – the redefinition of the table environments depends on the `xcolor` package, which needs to be loaded with the `table` option. Since so many other packages depend on the `xcolor` package and this style file is loaded at the very end of the preamble, there would either be a great chance of an option clash, or the option would have to be passed to the `xcolor` package before the preamble from the body of the `fithesis3` class thus breaking the encapsulation. Naming the option `table` forces the option to be processed by the `xcolor` package as well and it is therefore an elegant solution to the problem at hand.

\thesis@blocks@tables

- `lot`, `nolot` – `\listoftables` either is or isn't going to be included in the `\thesis@blocks@tables` block, respectively.

\thesis@blocks@tables

- `lof`, `nolof` – `\listoffigures` is or isn't going to be included in the `\thesis@blocks@tables` block, respectively.

\thesis@blocks@cover

\ifthesis@cover@

- `cover`, `nocover` – The `\thesis@blocks@cover` either is going to expand to either the thesis cover or produces no output, respectively. The `\ifthesis@cover@` conditional is set to `false` or `true`, respectively.

These are the default options:

```

\ProcessOptions
```

The file uses English locale strings within the macros.

```
\thesis@requireLocale{english}
```

The file loads the following packages:

- xcolor – Adds support for color manipulation.
- ifxetex – Used to detect the XeTeX engine.
- ifluatex – Used to detect the LuaTeX engine.
- graphix – Adds support for the inclusion of graphics files.
- pdfpages – Adds support for the injection of PDF documents into the resulting document, namely the thesis assignment.
- hyperref – Adds support for the injection of metadata into the resulting PDF document.
- keyval – Adds support for parsing comma-delimited lists of key-value pairs.

```
\thesis@require{xcolor}
\thesis@require{graphicx}
\thesis@require{pdfpages}
\thesis@require{keyval}
\thesis@require{ifxetex}
\thesis@require{ifluatex}
```

If the `\thesis@microtype@` is set to true, then the microtype package gets loaded.

```
\ifthesis@microtype@
  \thesis@require{microtype}
\fi
```

`\ifthesis@xeluatex` Using the `\ifxetex` and `\ifluatex` conditionals, a compound `\ifthesis@xeluatex` conditional was constructed. This conditional can be used by subsequently loaded style files to test, whether either the XeTeX or the LuaTeX engine is being used.

```
{\let\x\expandafter
\x\global\x\let\x\ifthesis@xeluatex\csname if%
  \ifxetex true\else
    \ifluatex\x\x\x t\x\x\x r\x\x\x u\x\x\x e%
    \else   f\x\x\x a\x\x\x l\x\x\x s\x\x\x e%
    \fi
  \fi\endcsname}
```

The following packages get only loaded, when the document is being typeset using the XeTeX or LuaTeX engine:

- fontspec – Allows the selection of system-installed fonts.
- unicode-math – Allows the selection of system-installed mathematical fonts.

Under XeTeX or LuaTeX, the TeX Gyre Pagella and TeX Gyre Pagella Math are also selected as the main text and math fonts.

```
\ifthesis@xeluatex
  \ifthesis@palatino@
    \thesis@require{fontspec}
    \thesis@require{unicode-math}
    \setmainfont[Ligatures=TeX]{TeX Gyre Pagella}
    \setmathfont[math-style=ISO,bold-style=ISO,vargreek-shape=TeX]%
      {texgyrepagella-math.otf}
  \fi
```

The following packages get only loaded, when the document is not being typeset using the XeTeX or LuaTeX engine and the `\ifthesis@palatino@` conditional is `true`:

- cmap – Places an explicit `ToUnicode` map in the resulting PDF file, allowing for the extraction of the text from the document.
- mathpazo – Changes the default math font family to `mathpazo`.
- tgpagella – Changes the default roman font family to TeX Gyre Pagella.
- lmodern – Changes the default sans-serif and monotype font faces to Latin Modern instead of the default Computer Modern font family.
- fontenc – The font encoding is set to Cork.

```
\else
  \ifthesis@palatino@
    \RequirePackage[resetfonts]{cmap}
    \thesis@require{lmodern}
    \thesis@require{mathpazo}
    \thesis@require{tgpagella}
    \RequirePackage[T1]{fontenc}
  \fi
\fi
```

If the \thesis@newtable@ and \thesis@color@ conditionals are true, then the following packages get loaded:

- tabularx – Provides the tabularx environment, which enables the typesetting of tables with flexible-width columns.
- tabu – Provides the tabu environment, which enables the typesetting of complex tables.
- booktabs – A package, which allows the creation of publication-quality tables in LaTeX.

Subsequently, the tabular and tabularx environments are redefined to better match the style of the given faculty.

\thesis@newtable@old
\endthesis@newtable@old
\thesis@newtable@oldx
\endthesis@newtable@oldx
\thesis@newtable@oldtabu
\endthesis@newtable@oldtabu

The \thesis@newtable@old and \endthesis@newtable@old macros containing the original definition of the tabular environment are always defined and are available for subsequently loaded styles in case the typesetting of unaltered tables is required. Similarly, the \thesis@newtable@oldx and \endthesis@newtable@oldx macros are defined for the tabularx environment and the \thesis@newtable@oldtabu and \endthesis@newtable@oldtabu for the tabu environment.

```
\let\thesis@newtable@old\tabular
\let\endthesis@newtable@old\endtabular

  % Adjust the measurements
```

```
  \setlength{\aboverulesep}{0pt}
  \setlength{\belowrulesep}{0pt}
  \setlength{\extrarowheight}{.75ex}

```

The hyperref package is configured to support both roman and arabic page numbering in one document and to decorate hyperlinks with an underline instead of a rectangular box.

```
\thesis@require{hyperref}
\hypersetup{
  pdfborderstyle={/S/U/W 1}, % Less obtrusive borders
  plainpages=false}          % Multiple page numbering support
```

Clubs and widows are set to be infinitely bad.

```
\widowpenalty 10000
\clubpenalty  10000
```

`\thesis@color@setup` The file defines the `\thesis@color@setup{`⟨*colors*⟩`}` command, where *colors* is a comma-delimited list of key-value pairs as defined by the keyval package. The command can be invoked either by the subsequently loaded style files or by the user to define which colors will be used, when the `color` option is specified.

```
\def\thesis@color@setup#1{%
  \setkeys{thesis@color}{#1}}
```

The following key-value pairs are supported:

1. `{`⟨`links=`*color*⟩`}` – Sets the color of hyperref links to *color* and stores it under the name `thesis@color@links`. The default color of links is specified by the hyperref package.
2. `{`⟨`tableOdd=`*color*⟩`}` – Stores the color of the odd rows of the redefined `tabular` and `tabularx` environments under the name `thesis@color@tableOdd`.
3. `{`⟨`tableEven=`*color*⟩`}` – Stores the color of the even rows of the redefined `tabular` and `tabularx` environments under the name `thesis@color@tableEven`.
4. `{`⟨`tableEmph=`*color*⟩`}` – Stores the color of an emphasized cell in a table user under the name `thesis@color@tableEmph`. This color is meant to be used manually by the user.

```
\define@key{thesis@color}{links}{%
  \definecolor{thesis@color@links}#1
  \hypersetup{linkbordercolor=thesis@color@links}}
\define@key{thesis@color}{tableOdd}{%
  \definecolor{thesis@color@tableOdd}#1}
\define@key{thesis@color}{tableEven}{%
  \definecolor{thesis@color@tableEven}#1}
\define@key{thesis@color}{tableEmph}{%

```

The file defines several blocks to be used in the redefinitions of the `\thesis@blocks@preamble` and `\thesis@blocks@postamble` macros by the subsequently loaded style files.

\thesis@blocks@frontMatter The \thesis@blocks@frontMatter macro sets up the style of the front matter of the thesis.

```
\def\thesis@blocks@frontMatter{%
  \thesis@blocks@clear
  \pagestyle{plain}
  \parindent 1.5em
  \setcounter{page}{1}
  \pagenumbering{roman}}
```

\thesis@blocks@clear The \thesis@blocks@clear macro clears the current page. It also clears the next left-hand (even-numbered) page, when double-sided typesetting is enabled.

```
\def\thesis@blocks@clear{%

```

\thesis@blocks@clearRight The \thesis@blocks@clearRight macro clears the current page. It also clears the next right-hand (odd-numbered) page, when double-sided typesetting is enabled.

```
\def\thesis@blocks@clearRight{%

```

s@blocks@facultyLogo@monochrome The \thesis@blocks@facultyLogo@monochrome[⟨*options*⟩] macro typesets the \thesis@logopath\thesis@facultyLogo logo with the given *options* passed to \includegraphics.

```
\newcommand{\thesis@blocks@facultyLogo@monochrome}[1]%

```

thesis@blocks@facultyLogo@color The \thesis@blocks@facultyLogo@color[⟨*options*⟩] macro typesets either the \thesis@logopath\thesis@facultyLogo logo, if the \ifthesis@color@ conditional is false, or the \thesis@logopath\thesis@facultyLogo-color logo otherwise with the given *options* passed to \includegraphics.

\thesis@blocks@cover

The \thesis@blocks@cover macro typesets the thesis cover. It is composed of three macros:

\thesis@blocks@cover@header

- \thesis@blocks@cover@header – The header of the cover page

\thesis@blocks@cover@content

- \thesis@blocks@cover@content – The content of the cover page

\thesis@blocks@cover@footer

- \thesis@blocks@cover@footer – The footer of the cover page

This allows the subsequently loaded style files to only redefine certain parts of the cover page.

```

The output of the `\thesis@blocks@cover@header` macro is controlled by the following conditionals:

1. `\ifthesis@blocks@cover@university@` – This conditional expression determines, whether the university name is going to be included in the header of the cover. The default value of this conditional is `true`.
2. `\ifthesis@blocks@cover@faculty@` – This conditional expression determines, whether the faculty name is going to be included in the header of the cover. The default value of this conditional is `true`.
3. `\ifthesis@blocks@cover@department@` – This conditional expression determines, whether the department name is going to be included in the header of the cover. The default value of this conditional is `false`.
4. `\ifthesis@blocks@cover@field@` – This conditional expression determines, whether the field of study is going to be included in the header of the cover. The default value of this conditional is `false`.

The sebsequently loaded style files can modify the value of these conditionals to alter the output of the `\thesis@blocks@cover@header` macro without altering its definition.

3.6.2.5 The `style/mu/fithesis-12.clo` file

This file is conditionally loaded by the `style/mu/base.sty` file to redefine the page geometry to match the type size of 12 points. The type dimensions defined by the file are stored in the following macros as well:

- `\thesis@titlePage@normalsize` – Equivalent to `\normalsize`
- `\thesis@titlePage@small` – Equivalent to `\small`
- `\thesis@titlePage@footnotesize` – Equivalent to `\footnotesize`
- `\thesis@titlePage@scriptsize` – Equivalent to `\scriptsize`
- `\thesis@titlePage@tiny` – Equivalent to `\tiny`
- `\thesis@titlePage@large` – Equivalent to `\large`
- `\thesis@titlePage@Large` – Equivalent to `\Large`
- `\thesis@titlePage@LARGE` – Equivalent to `\LARGE`
- `\thesis@titlePage@huge` – Equivalent to `\huge`
- `\thesis@titlePage@Huge` – Equivalent to `\Huge`

These macros can be used to typeset elements whose size should remain constant regardless of the font size setting.

3.6.3 The style files of the Faculty of Informatics

3.6.3.1 The `style/mu/fithesis-fi.sty` file

This is the style file for the theses written at the Faculty of Informatics at the Masaryk University in Brno. It has been prepared in accordance with the formal requirements published at the website of the faculty[1].

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis/style/mu/fithesis-fi}[2015/11/29]
```

The file defines the color scheme of the respective faculty.

```
\thesis@color@setup{
  links={HTML}{FFD451},
  tableEmph={HTML}{FFD451},
  tableOdd={HTML}{FFF9E5},
  tableEven={HTML}{FFECB3}}
```

In case of rigorous and doctoral theses, the style file hides the thesis assignment in accordance with the formal requirements of the faculty.

```
\ifx\thesis@type\thesis@bachelors\else
\ifx\thesis@type\thesis@masters\else
  \thesis@blocks@assignment@false

```

`\thesis@blocks@titlePage`

The style file redefines the cover and title page footers to include the thesis advisor's name and signature in case of a rigorous thesis. Along with the macros required by the locale file interface, the locale files need to define the following macros:

`\thesis@advisorSignature`

- `\thesis@advisorSignature` – The label of the advisor signature field typeset

in the case of rigorous theses

```

`\thesis@blocks@declaration` The `\thesis@blocks@declaration` macro typesets the declaration text. Compared to the definition within the `style/mu/base.sty` file, this macro also typesets the advisor's name at the bottom of the page.

```

3.6.7.1 The `style/mu/fithesis-fss.sty` file

This is the style file for the theses written at the Faculty of Social Studies at the Masaryk University in Brno. Because of the inexistence of faculty-wide formal requirements and recommendations with each department defining their own with varying degrees of rigour[5], this style is a mere skeleton, which is unlikely to satisfy the exact requirements of any department and will require modification by the user.

v0.3.09
General: A complete refactoring of the class. The class was decomposed into a base class, locale files and style files. [VN] 207
v0.3.10
General: Fixed a typo in the technical documentation. Updated the *Advanced usage* chapter of the user guide. The required packaged listed in Section 2.2 of the user guide are now always correct. Adjusted the footer spacing in the styles of econ and fi. Added *Advanced usage* chapter to the user guide. Added the description of basic options into the user guide. Added the table and oldtable options. Added the type field to the guide for completeness. [VN] 207
v0.3.11
General: Added hyphenation into the technical documentation. Fixed an unterminated group. Polished the text of the guide. Added the palatino and nopalatino options. Stylistic changes to the text of the technical documentation. \thesis@subdir is now robust against relative paths. Accounted for French spacing in the guide. Fixed the thesis@english@facultyName string. Documentation refinements. [VN] 207
v0.3.12
General: The subsections and subsubsections now use the correct tocdepth. [VN] 207
v0.3.13
General: Fixed an inconsistency in the example code. Removed an extraneous \thesis@blocks@clear block withing the definition of \thesis@blocks@frontMatter in the fss style file. Added comments, fixed clubs and widows and removed text overflows within the user guides. Adjusted the colors of various style files. Removed the trailing dot in the bibliographic identification within the med and ped style files. Fixed a typo within the technical documentation. Fixed the twoside alignment of the \thesis@blocks@bibEntry and the \thesis@blocks@bibEntryEn blocks within the sci style file. The \thesis@blocks@assignment block no longer clears a page when nothing is inserted. It is also no longer hardcoded to be hidden for rigorous theses. Instead, the \ifthesis@blocks@assignment conditional can be set either by the subsequently loaded style files or by the user. So far, only the fi and sci style files set the conditional. [VN] 207
v0.3.14
General: Updated the documentation. [VN] 207
v0.3.15
General: Renamed \thesis@requireStyle to \thesis@requireWithOptions and moved the style loader from the \thesis@load routine to a new \thesis@requireStyle macro to make the semantics

of \thesis@requireLocale and \thesis@requireStyle more similar. Changed the basepath, logopath, localepath and stylepath keys to match the lower camelcasing of the rest of the keys. Added further description regarding the use of the assignment key. [VN] . . . 207
v0.3.16
General: Clubs and widows are now set to be infinitely bad. The assignment key has weaker, but more robust semantics now. [VN] 207
v0.3.17
General: Changed a forgotten \thesis@@lower{...} invocation in the definition of \thesis@czech@declaration for the Faculty of Arts into \thesis@@lower{czech@...}, so that the macro always expands to the correct output regardless of the current locale. This is merely a matter of consistency, since the style file of the Faculty of Arts only uses Czech strings within the Czech locale. Removed an extraneous comment. Fixed a unit test. Fixed a changelog entry. [VN] 207
v0.3.18
General: A bulk of changes required to submit the document class to CTAN: Changed the structure of the output fithesis3.ctan.zip archive. Updated the license notice. Added a README file. Canonicalized a url within the user guides. Renamed the root directory from fithesis3/ to fithesis/. Refactored the makefiles. Added developer example files. Renamed docstrip.cfg to LICENSE.tex to better describe its role. The fithesis.dtx file now generates a VERSION.tex file containing the version of the package, when it's being typeset. Flattened the logo/ directory structure. [VN] 207
v0.3.19
General: Updated the license. Added the fithesis- prefix to locale files. Proof-read and updated the documentation. Encapsulated the localeInheritance and styleInheritance setters. Added the \thesis@selectLocale{...}, which acts as a replacement for \def\thesis@locale{...}, which also switches hyphenation patterns. The macro definitions inside locale files are now global to account for the fact that it now makes sense to include locale files on-site (and therefore possibly inside a group) using the \thesis@selectLocale. The class files are now generated using the XeTeX engine, which preserves the characters outside ASCII. [VN] 207
v0.3.20
General: Removed an extraneous \hypersetup option to eliminate a warning. Performed several minor Makefile updates. Updated the technical documentation. [VN] 207
v0.3.21
General: Fixed an invalid font name. [VN] 207
v0.3.22
General: Updated the link colors in the style of the Faculty of Economics and Administration at the Masaryk University in Brno and fixed the title page leading in the style of the Faculty of Science at the Masaryk University in Brno. [VN] 207
v0.3.23
General: Fixed a typo in the Slovak locale. [VN] 207

v0.3.24
General: Added the \thesis@backend tunable. The hyphenation pattern switching now uses polyglossia instead of crude \language switching wherenever possible. Added the opt-out microtype class option, which loads the microtypographic extension. The \thesis@*locale*@summer and @winter locale macros were renamed to @spring and @fall. The \thesis@parseDate now uses more realistic month ranges to set \thesis@season and \thesis@academicYear. Removed the extraneous indent in the \thesis@blocks@declaration macro definition within the style/mu/fithesis-fi.sty style file. \paragraphs are not included in the table of contents by default. The table class option now supports the tabu environment. The list of tables and the list of figures now have an entry in the table of contents for the style/mu/fithesis-econ.sty style file. [VN] 207
v0.3.25
General: The example documents from the example directory are now a part of the CTAN archive. Additional information were inserted into the guide and to the example files. [VN] 207
v0.3.26
General: Updated the example documents and the user guide. Fixed a typo in the description of \thesis@season. [VN] . . . 207
v0.3.27:1
General: Fixed a typo in the guide. Added a compatibility layer for \title, \author, and \maketitle. Minor changes of the documentation. [VN] . . . 207
v0.3.27:2
General: \thesis@selectLocale is no longer performed globally for the entire document during \thesis@load (effectively overriding the user's hyphenation settings, if Babel's or Polyglossia's \languagename differs from \thesis@locale). Instead, \thesis@preamble and @postamble now locally switch the locale and expand \thesis@blocks@preamble and @postamble, which are the new redefinables. Since this breaks the behaviour of \thesis@blocks@mainMatter, whose effects would also be local, @mainMatter is now executed directly by \thesis@preamble after closing the group and becomes a new part of the interface between the class and the style files. [VN] 207
v0.3.27:3
General: As a preparation for the future inclusion of bibliography support, the csquotes package is loaded, @csquotesStyle is a new part of the locale interface that sets the csquotes style of a locale, and \thesis@selectLocale now switches the csquotes style. [VN] 207
v0.3.27:4
General: \thesis@english@declaration now uses the correct idiom (by one's own → on one's own). [VN] 207
v0.3.27:5
General: The PDF bookmarks are no longer garbled, when the LuaTEX engine is used. [VN] . 207
