Abstract

This document details the design and the implementation of the fithesis3 document class. It contains technical information for anyone who wishes to extend the class with their locale or style files. Users who only wish to use the class are advised to consult the guides distributed along with the class, which only document the parts of the public API relevant to the given style files.

1 Required classes and packages

The class loads the rapport3 base class and the following packages:

- keyval – Adds support for parsing comma-delimited lists of key-value pairs.
- etoolbox – Adds support for expanding code after the preamble using the \AtPreamble hook.
- ifxetex – Used to detect the XeTeX engine.
- ifluatex – Used to detect the LuaTeX engine.
- inputenc – Used to enable the input UTF-8 encoding. This package does not get loaded under the XeTeX and LuaTeX engines.

The hyperref package is also conditionally loaded during the expansion of the \thesis@load macro (see Section 3.1). Other packages may be required by the style files (see Section 3.6) you are using.

```
\ProvidesClass{fithesis3}[\thesis@version]
\LoadClass[a4paper]{rapport3}
\RequirePackage{keyval}
\RequirePackage{etoolbox}
\RequirePackage{ifxetex}
\RequirePackage{ifluatex}
\ifxetex\else\ifluatex\else
  \RequirePackage[utf8]{inputenc}
\fi\fi
```

2 Public API

2.1 Options

Any [⟨*options*⟩] passed to the class will be handed down to the loaded style files. The supported options are therefore documented in the subsections of Section 3.6 dedicated to the respective style files.

2.2 The \thesissetup macro

\thesissetup The main public macro is the \thesissetup{⟨*keyvals*⟩} command, where *keyvals* is a comma-delimited list of key-value pairs as defined by the keyval package. This macro needs to be included prior to the beginning of a LaTeX document. When used, the *keyvals* are processed.

Note that the values passed to the \thesissetup public macro may only contain one paragraph of text. If you wish to set multiple paragraphs of text as the value, you need to use the \thesislong public macro (see Section 2.3).

```
\def\thesissetup#1{%
  \setkeys{thesis}{#1}}
```

2.2.1 The basepath key

\thesis@basepath

The {⟨basepath=*path*⟩} pair sets the *path* containing the class files. The *path* is prepended to every other path (\thesis@logopath, \thesis@stylepath and \thesis@localepath) used by the class. If non-empty, the *path* gets normalized to *path/*. The normalized *path* is stored within the private \thesis@basepath macro, whose implicit value is fithesis3/.

```
\def\thesis@basepath{fithesis3/}
\define@key{thesis}{basepath}{%
  \ifx\thesis@empty#1\thesis@empty%
    \def\thesis@basepath{}%
  \else%
    \def\thesis@basepath{#1/}%
  \fi}
```

\thesis@logopath

2.2.2 The logopath key

The {⟨logopath=*path*⟩} pair sets the *path* containing the logo files, which is used by the style files loading the logo. The *path* is normalized using the private \thesis@subdir macro and stored within the private \thesis@logopath macro, whose implicit value is \thesis@basepath followed by logo/\thesis@university/. By default, this expands to fithesis3/logo/mu/.

```
\def\thesis@logopath{\thesis@basepath logo/\thesis@university/}
\define@key{thesis}{logopath}{%
  \def\thesis@logopath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@subdir

The \thesis@subdir private macro returns / unchanged, coerces ., .., */path*, ./*path* and ../*path* to ./, ../, */path/*, ./*path/* and ../*path/*, respectively, and coerces any other *path* into \thesis@basepath *path/*.

```
\def\thesis@subdir#1#2#3#4\empty{%
  \ifx#1\empty%           <empty> -> <basepath>
    \thesis@basepath
  \else
    \if#1/%
      \ifx#2\empty%             / -> /
        /%
      \else%              /<path> -> /<path>/
        #1#2#3#4/%
      \fi
    \else%
      \if#1.%
        \ifx#2\empty%           . -> ./
          ./%
```

```
      \else
        \if#2.%
          \ifx#3\empty%      .. -> ../
            ../%
          \else
            \if#3/%   ../<path> -> ../<path>/
              ../#4/%
            \else
              \thesis@basepath#1#2#3#4/%
            \fi
          \fi
        \else
          \if#2/%      ./<path> -> ./<path>/
            ./#3#4/%
          \else
            \thesis@basepath#1#2#3#4/%
          \fi
        \fi
      \fi
    \else
      \thesis@basepath#1#2#3#4/%
    \fi
  \fi%
\fi}
```

\thesis@stylepath

2.2.3 The stylepath key

The {⟨stylepath=*path*⟩} pair sets the *path* containing the style files. The *path* is normalized using the private \thesis@subdir macro and stored within the private \thesis@stylepath macro, whose implicit value is \thesis@basepath style/. By default, this expands to fithesis3/style/.

```
\def\thesis@stylepath{\thesis@basepath style/}
\define@key{thesis}{stylepath}{%
  \def\thesis@stylepath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@localepath

2.2.4 The localepath key

The {⟨localepath=*path*⟩} pair sets the *path* containing the locale files. The *path* is normalized using the private \thesis@subdir macro and stored within the private \thesis@localepath macro, whose implicit value is \thesis@basepath followed by locale/. By default, this expands to fithesis3/locale/.

```
\def\thesis@localepath{\thesis@basepath locale/}
\define@key{thesis}{localepath}{%
  \def\thesis@localepath{\thesis@subdir#1%
    \empty\empty\empty\empty}}
```

\thesis@def The \thesis@def[⟨*key*⟩]{⟨*name*⟩} private macro defines the private \thesis@*name* macro to expand to either «*key*», if specified, or to «*name*». The macro serves to provide the placeholder string for user-defined macros with no default value.

```
\newcommand{\thesis@def}[2][]{%
  \expandafter\def\csname thesis@#2\endcsname{%
    <<\ifx\thesis@empty#1\thesis@empty#2\else#1\fi>>}}
```

\thesis@declaration

2.2.5 The declaration key

The {⟨declaration=*text*⟩} pair sets the declaration *text* to be included into the document. \thesis@basepath followed by *path*. The *text* is stored within the private \thesis@declaration macro, whose implicit value is \thesis@@{declaration}.

```
\def\thesis@declaration{\thesis@@{declaration}}
\long\def\KV@thesis@declaration#1{%
  \long\def\thesis@declaration{#1}}
```

\ifthesis@woman

2.2.6 The gender key

The {⟨gender=*char*⟩} pair sets the author's gender to either a male, if *char* is the character m, or to a female. The gender can be tested using the \ifthesis@woman ... \else ... \fi conditional. The implicit gender is male.

```
\newif\ifthesis@woman\thesis@womanfalse
\define@key{thesis}{gender}{%
  \def\thesis@male{m}%
  \def\thesis@arg{#1}%
  \ifx\thesis@male\thesis@arg%
    \thesis@womanfalse%
  \else%
    \thesis@womantrue%
  \fi}
```

\thesis@author

2.2.7 The author key

The {⟨author=*name*⟩} pair sets the author's full name to *name*. The *name* is parsed using the private macro and stored within the following private macros:

\thesis@parseAuthor

\thesis@author

- \thesis@author – The full name of the author.

\thesis@author@head

- \thesis@author@head – The first space-delimited part of the name. This corresponds to the author's first name.

\thesis@author@tail

- \thesis@author@tail – The full name without the first space-delimited part of the name. This corresponds to the author's surname.

```
\def\thesis@parseAuthor#1{%
  \def\thesis@author{#1}%
  \def\thesis@author@head{\expandafter\expandafter\expandafter%
    \@gobble\thesis@head#1 \relax}%
  \def\thesis@author@tail{\thesis@tail#1 \relax}}
\thesis@def{author}%
\thesis@def[author]{author@head}%

\define@key{thesis}{author}{%
  \thesis@parseAuthor{#1}}
```

\thesis@id

2.2.8 The id key

The {⟨id=*identifier*⟩} pair sets the identifier of the thesis author to *identifier*. This usually corresponds to a unique identifier of the author within the information system of the given university.

```
\thesis@def{id}
\define@key{thesis}{id}{%
  \def\thesis@id{#1}}
```

\thesis@type

2.2.9 The type key

The {⟨type=*type*⟩} pair sets the type of the thesis to *type*. The following types of theses are recognized:

The thesis type	The value of *type*
Bachelor's thesis	bc
Master's thesis	mgr
Doctoral thesis	d
Rigorous thesis	r

The *type* is stored within the private \thesis@type macro, whose implicit value is bc. For the ease of testing of the thesis type via \ifx conditions within style and locale files, the \thesis@bachelors, \thesis@masters, \thesis@doctoral and \thesis@rigorous macros containing the corresponding *type* values are available as a part of the private API.

\thesis@bachelors
\thesis@masters
\thesis@doctoral
\thesis@rigorous

```
\def\thesis@bachelors{bc}
\def\thesis@masters{mgr}
\def\thesis@doctoral{d}
\def\thesis@rigorous{r}
\let\thesis@type\thesis@bachelors
\define@key{thesis}{type}{%
  \def\thesis@type{#1}}
```

\thesis@university

2.2.10 The `university` key

The {⟨`university`=*id*⟩} pair sets the identifier of the university, at which the thesis is being written, to *id*. The *id* is stored within the private `\thesis@university` macro, whose implicit value is `mu`. The `\thesis@university` macro is used by the `\thesis@logopath` macro and when loading the style and locale files using the `\thesis@load` macro. It allows for the usage of the class at universities other than the Masaryk University in Brno without the need to alter the code.

```
\def\thesis@university{mu}
\define@key{thesis}{university}{%
  \def\thesis@university{#1}}
```

\thesis@faculty

2.2.11 The `faculty` key

```
\def\thesis@facultyLogo{\thesis@faculty}
\define@key{thesis}{facultyLogo}{%
  \def\thesis@facultyLogo{#1}}
```

\thesis@style

2.2.20 The style key

The {⟨style=*filename*⟩} pair sets the filename of the style file to be used to *filename*. The *filename* is stored within the private \thesis@style macro, whose implicit value is \thesis@university/fithesis3-\thesis@faculty. The style file is loaded from the \thesis@stylepath\thesis@style path.

```
\def\thesis@style{\thesis@university/fithesis3-\thesis@faculty}
\define@key{thesis}{style}{%
  \def\thesis@style{#1}}
```

\thesis@style@inheritance

2.2.21 The styleInheritance key

The {⟨styleInheritance=*bool*⟩} pair either enables, if *bool* is true or unspecified, or disables the inheritance for style files. The effects of the inheritance are documented within the subsection documenting the \thesis@load macro. The setting can be tested using the \ifthesis@style@inheritance ... \else ... \fi conditional. Inheritance is enabled for style files by default.

```
\newif\ifthesis@style@inheritance\thesis@style@inheritancetrue
\define@key{thesis}{styleInheritance}[true]{%
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg%
    \thesis@style@inheritancetrue%
  \else%
    \thesis@style@inheritancefalse%
  \fi}
```

\thesis@locale

2.2.22 The `locale` key

The {⟨locale=*filename*⟩} pair sets the filename of the locale file(s) to be used to *filename*. The *filename* is stored within the private \thesis@locale macro, whose implicit value is the main language of either the babel or the polyglossia package, or english, when undefined. If the inheritance is disabled for locale files, the locale file is loaded from the \thesis@localepath\thesis@locale path.

```
\def\thesis@locale{%
  % Babel detection
  \ifx\languagename\undefined%
  english\else\languagename\fi}
\define@key{thesis}{locale}{%
  \def\thesis@locale{#1}}
```

\ifthesis@english

The English locale is special. Several parts of the document will typically be typeset in both the current locale and English. However, if the current locale is English, this would result in duplicity. To avoid this, the \ifthesis@english ...\else ...\fi conditional is made available for testing, whether or not the current locale is English.

```
\def\ifthesis@english{
  \expandafter\def\expandafter\@english\expandafter{\string%
  \english}%
  \expandafter\expandafter\expandafter\def\expandafter%
  \expandafter\expandafter\@locale\expandafter\expandafter%
  \expandafter{\expandafter\string\csname\thesis@locale\endcsname}%
  \expandafter\csname\expandafter i\expandafter f\ifx\@locale%
  \@english%
    true%
  \else%
    false%
  \fi\endcsname}
```

\thesis@locale@inheritance

2.2.23 The `localeInheritance` key

The {⟨localeInheritance=*bool*⟩} pair either enables, if *bool* is true or unspecified, or disables the inheritance. The effects of the inheritance are documented within the subsection documenting the \thesis@load macro. The setting can be tested using the \ifthesis@locale@inheritance ...\else ...\fi conditional. Inheritance is enabled for locale files by default.

```
\newif\ifthesis@locale@inheritance\thesis@locale@inheritancetrue
\define@key{thesis}{localeInheritance}[true]{%
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg%
    \thesis@locale@inheritancetrue%
  \else%
    \thesis@locale@inheritancefalse%
  \fi}
```

2.2.24 The date key

The {⟨date=*date*⟩} pair sets the date of the thesis defence to *date*, where *date* is a string in the YYYY/MM/DD format, where YYYY stands for full year, MM stands for month and DD stands for day. The *date* is parsed and stored using the \thesis@parseDate private macro within the following private macros:

\thesis@parseDate

\thesis@date
- \thesis@date – The whole date

\thesis@year
- \thesis@year – The year

\thesis@month
- \thesis@month – The month

\thesis@day
- \thesis@day – The day of month

\thesis@season
- \thesis@season – Expands to either:
  - winter if MM $<$ 7.
  - summer if MM $\geq$ 7.

\thesis@academicYear
- \thesis@academicYear – The academic year of the given semester:
  - YYYY/YYYY$+1$ in case of a summer semester
  - YYYY-1/YYYY in case of a winter semester

To set up the default values, the \thesis@parseDate macro is called with the fully expanded \the\year/\the\month/\the\day string.

```

```
\define@key{thesis}{assignment}{%
  \def\thesis@assignmentFiles{#1}}
```

\ifthesis@auto

2.2.39 The autoLayout key

The {⟨autoLayout=*bool*⟩} pair either enables, if *bool* is true or unspecified, or disables autolayout. Autolayout injects the \thesis@preamble and \thesis@postamble private macros at the beginning and the end of the document, respectively. The setting can be tested using the \ifthesis@auto ... \else ... \fi conditional. The autolayout is enabled by default.

```
\newif\ifthesis@auto\thesis@autotrue
\define@key{thesis}{autoLayout}[true]{%
  \def\@true{true}%
  \def\@arg{#1}%
  \ifx\@true\@arg%
    \thesis@autotrue%
  \else%
    \thesis@autofalse%
  \fi}
```

\thesis@preamble
\thesis@postamble

The \thesis@postamble and \thesis@preamble private macros are defined as empty strings by default and are subject to redefinition by the style files.

```
\def\thesis@preamble{}
\def\thesis@postamble{}
```

2.3 The \thesislong macro

\thesislong

The public macro \thesislong{⟨*key*⟩}{⟨*value*⟩}, where *value* may contain multiple paragraphs of text, can be used for the following *key*s as an alternative to the \thesissetup public macro, which only permits a single paragraph as the *value*:

- abstract
- abstractEn
- thanks
- declaration

```
\long\def\thesislong#1#2{%
  \csname KV@thesis@#1\endcsname{#2}}
```

3 Private API

3.1 Main routine

\thesis@load

The \thesis@load macro is responsible for preparing the environment for, and consequently loading, the necessary locale and style files. By default, the \thesis@load macro gets expanded at the end of the preamble, but it can be inserted manually prior to that, if necessary to prevent package clashes. The \ifthesis@loaded semaphore ensures that the expansion is only performed once.

```
\newif\ifthesis@loaded\thesis@loadedfalse
\AtEndPreamble{\thesis@load}
\def\thesis@load{%
  \ifthesis@loaded\else%
    \thesis@loadedtrue
    \makeatletter%
```

First, the main locale file is loaded using the `\thesis@requireLocale` macro.

```
      % Load the main locale file
      \thesis@requireLocale{\thesis@locale}
```

Consequently, the style files are loaded with the class options passed onto them. If inheritance is enabled for style files, then each of the following files is loaded in sequence, if they exist:

1. `\thesis@stylepath fithesis3-base.sty`
2. `\thesis@stylepath\thesis@university/fithesis3-base.sty`
3. `\thesis@stylepath\thesis@style.sty`

If inheritance is disabled for style files, then only the `\thesis@stylepath\thesis@style.sty` file is loaded. The `fithesis3-` prefix serves to prevent package clashes with other similarly named package files within the TEX directory structure.

```
      \ifthesis@style@inheritance
        \thesis@requireStyle{\thesis@stylepath fithesis3-base}
        \thesis@requireStyle{\thesis@stylepath\thesis@university%
          /fithesis3-base}
      \fi
      \thesis@requireStyle{\thesis@stylepath\thesis@style}
```

With the placeholder strings loaded from the locale files, we can now inject metadata into the resulting PDF file. To this end, the `hyperref` package is conditionally included with the `unicode` option. Consequently, the following values are assigned to the PDF headers:

- `Title` is set to `\thesis@title`.
- `Author` is set to `\thesis@author`.
- `Keywords` is set to `\thesis@keywords`.
- `Creator` is set to `2015/05/30 v0.3.13 fithesis3 MU thesis class`.

```
      \thesis@require{hyperref}%
     {\hypersetup{unicode,
        pdftitle={\thesis@title},%
        pdfauthor={\thesis@author},%
        pdfkeywords={\thesis@keywords},%
        pdfcreator={\thesis@version},%
    }}%
```

If autolayout is enabled, the \thesis@preamble and \thesis@postamble macros are scheduled for expansion at the beginning and at the end of the document, respectively.

```
      \ifthesis@auto%
        \AtBeginDocument{\thesis@preamble}%
        \AtEndDocument{\thesis@postamble}%
      \fi%
```

Lastly, a BibTeX file named \jobname.bib containing the bibliographical entry for the thesis is scheduled to be generated at the end of the document in the working directory using the \thesis@bibgen macro and the \thesis@pages private macro definition containing the length of the document is scheduled to be included in the auxiliary file.

\thesis@pages

```
      \AtEndDocument{%
        % Define \thesis@pages for the next run
        \write\@auxout{\noexpand\gdef\noexpand%
          \thesis@pages{\thepage}}}
    \makeatother%
  \fi}
```

3.2 File manipulation macros

\thesis@exists The \thesis@exists{⟨*file*⟩}{⟨*tokens*⟩} private macro is used to test for the existence of a given *file*. If the *file* exists, the macro expands to *tokens*. Otherwise, a class warning is written to the output.

```
\def\thesis@input#1{%
  \thesis@exists{#1}{\input{#1}}}
```

\thesis@input The \thesis@input{⟨*file*⟩} private macro inputs the given *file*, if it exists.

```
\def\thesis@exists#1#2{%
  \IfFileExists{#1}{#2}{%
  \ClassWarning{fithesis3}{File #1 doesn't exist}}}
```

\thesis@require The \thesis@require {⟨*package*⟩} expands to \RequirePackage{⟨*package*⟩}, if the specified *package* has not yet been loaded. This generally serves to prevents options clashes, when the options with which the package had been loaded are of no consequence.

```
\def\thesis@require#1{%
  \@ifpackageloaded{#1}{}{\RequirePackage{#1}}}
```

\thesis@requireStyle The \thesis@requireStyle{⟨*package*⟩} expands to \RequirePackageWithOptions{⟨*package*⟩}, if the specified *package* exists and has not yet been loaded. This generally serves to load style files.

```
\def\thesis@requireStyle#1{\thesis@exists{#1.sty}{%
  \@ifpackageloaded{#1}{}{\RequirePackageWithOptions{#1}}}}
```

\thesis@requireLocale The \thesis@requireLocale{⟨*locale*⟩} private macro loads locale files of the specified *locale*, if they haven't been loaded before. If inheritance is enabled for locale files, then the following directories are used:

1. `\thesis@localepath`
2. `\thesis@localepath\thesis@university/`
3. `\thesis@localepath\thesis@university/\thesis@faculty/`

If inheritance is disabled for locale files, then only the `\thesis@localepath` directory is used. The macro can be used within both locale and style files, although the usage within locale files is strongly discouraged to prevent circular dependencies.

```
\def\thesis@requireLocale#1{%
  % Prevent redundant entries
  \expandafter\ifx\csname thesis@#1@required\endcsname\relax%
    \expandafter\def\csname thesis@#1@required\endcsname{}%
      \thesis@input{\thesis@localepath#1.def}
      \ifthesis@locale@inheritance%
        \thesis@input{\thesis@localepath\thesis@university/#1.def}%
        \thesis@input{\thesis@localepath\thesis@university/%
          \thesis@faculty/#1.def}%
      \fi%
  \fi}
```

3.3 String manipulation macros

`\thesis@` The `\thesis@{`⟨*name*⟩`}` macro expands to `\thesis@` *name*, where *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@#1{\csname thesis@#1\endcsname}
```

`\thesis@@` The `\thesis@@{`⟨*name*⟩`}` macro expands to `\thesis@` *locale*`@`*name*, where *locale* corresponds to the name of the current locale. *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@@#1{\thesis@{\thesis@locale @#1}}
```

`\thesis@lower` `\thesis@upper` The `\thesis@lower` and `\thesis@upper` private macros are used for upper- and lowercasing within locale files. To cast the `\thesis@`*name* macro to the lower- or uppercase, `\thesis@lower{`*name*`}` or `\thesis@upper{`*name*`}` would be used, respectively. *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@lower#1{{%
  \let\ea\expandafter%
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\lowercase\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea{\ea\ea\ea\ea\ea\ea\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\@gobble\ea\ea\ea\string\ea\csname\csname the%
  sis@#1\endcsname\endcsname}}}
\def\thesis@upper#1{{%
  \let\ea\expandafter%
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\uppercase\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea\ea{\ea\ea\ea\ea\ea\ea\ea\ea\ea
  \ea\ea\ea\ea\ea\ea\@gobble\ea\ea\ea\string\ea\csname\csname the%
  sis@#1\endcsname\endcsname}}}
```

\thesis@@lower
\thesis@@upper

The \thesis@@lower and \thesis@@upper private macros are used for upper- and lowercasing current *locale* strings within style files. To cast the \thesis@*locale*@*name* macro to the lower- or uppercase, \thesis@@lower{*name*} or \thesis@@upper{*name*} would be used, respectively. *name* gets fully expanded and can therefore contain active characters and command sequences.

```
\def\thesis@@lower#1{\thesis@lower{\thesis@locale @#1}}
\def\thesis@@upper#1{\thesis@upper{\thesis@locale @#1}}
```

\thesis@head
\thesis@tail

The \thesis@head and \thesis@tail private macros are used for retrieving a head or a tail of space-separated token sequences, which end with \relax.

```
\def\thesis@head#1 #2{%
  \ifx\relax#2%
    \expandafter\@gobbletwo%
  \else%
    \ #1%
  \fi%
  \thesis@head#2}%
\def\thesis@tail#1 #2{%
  \ifx\relax#2%
    #1%
    \expandafter\@gobbletwo%
  \fi%
  \thesis@tail#2}%
```

3.4 General purpose macros

\thesis@pages

The \thesis@pages macro is defined at the beginning of the second LaTeX run as a part of the main routine (see Section 3.1). During the first run, the macro expands to ??.

```
\ifx\thesis@pages\undefined\def\thesis@pages{??}\fi
```

3.5 Locale files

Locale files contain macro definitions for various locales. They live in the locale/ subtree and they are loaded during the main routine (see Section 3.1).

When creating a new locale file, it is advisable to create one self-contained dtx file, which is then partitioned into locale files via the docstrip tool based on the respective ins file. A macro \file{⟨*filename*⟩} is available for the sectioning the documentation of various files within the dtx file. *filename*. For more information about dtx files and the docstrip tool, consult the dtxtut, docstrip, doc and ltxdoc manuals.

\file

3.5.1 Interface

3.6 Style files

Style files define the structure and the look of the resulting document. They live in the `style/` subtree and they are loaded during the main routine (see Section 3.1).

When creating a new style file, it is advisable to create one self-contained `dtx` file, which can contain several files to be extracted via the `docstrip` tool based on the respective `ins` file. A macro `\file{`⟨*filename*⟩`}` is available for sectioning the documentation of various files within the `dtx` file. For more information about `dtx` files and the `docstrip` tool, consult the `dtxtut`, `docstrip`, `doc` and `ltxdoc` manuals.

`\file`

3.6.1 Interface

The union of style files loaded via main routine's inheritance scheme (see Section 3.1) should define at least one of the following private macros:

\thesis@preamble
- `\thesis@preamble` – If autolayout is enabled, then this macro is expanded at the very beginning of the document.

\thesis@postamble
- `\thesis@postamble` – If autolayout is enabled, then this macro is expanded at the very end of the document.

3.6.2 Base style files

3.6.2.1 The `style/fithesis3-base.sty` file

If inheritance is enabled for style files, then this file is always the first style file to be loaded, regardless of the value of the `\thesis@style` macro. This style file is currently a dummy file.

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis3/style/fithesis3-base}[2015/04/08]
```

3.6.2.2 The `style/mu/fithesis3-base.sty` file

This is the base style file for theses written at the Masaryk University in Brno. If inheritance is enabled for style files, then this file is always the second style file to be loaded right after `style/base.sty`, regardless of the value of the `\thesis@style` macro.

```
\ProvidesPackage{fithesis3/style/mu/fithesis3-base}[2015/05/30]
\NeedsTeXFormat{LaTeX2e}
```

The file recognizes the following options:

- `10pt`, `11pt`, `12pt` – Sets the type size to 10, 11 or 12 points respectively, along with the page geometry. The default type size is 12 points.
- `oneside`, `twoside` – The document is going to be single- or double-sided. In a double-sided document headers, page numbering, margin notes and several other elements are rearranged based on the parity of the page. Blank pages are optionally inserted prior the beginning of the next chapter to ensure that it starts on an left-hand (even-numbered) page.

  \ifthesis@twoside@
  The `\ifthesis@twoside@` conditional is set to either `false` or `true`, respectively. This value can be tested in the subsequently loaded style files.
- `onecolumn`, `twocolumn` – The document is going to be set in a single column or in two columns, respectively.
- `draft`, `final` – Overful lines are or aren't marked within the document, respectively.

\ifthesis@palatino@

- palatino, nopalatino – The default roman and math font family is going to be either set to Palatino or left untouched, respectively. The \ifthesis@palatino@ conditional is set to either true or false, respectively. This value can be tested in the subsequently loaded style files.

  The Palatino font is a part of the visual identity of the Faculty of Informatics, at which the document class was created.

\ifthesis@color@

- color, monochrome – Certain typographical elements either are or aren't going to be typeset in color, respectively. The \ifthesis@color@ conditional is set to either true or false, respectively. This value can be tested in the subsequently loaded style files.

\ifthesis@newtable@

- table, oldtable – If the \ifthesis@color@ conditional is true, then the definition of the tabular and tabularx commands either are or aren't going to be altered to better match the style, respectively. The \ifthesis@newtable@ conditional is set to either true or false, respectively.

  The choice of the name is deliberate – the redefinition of the table environments depends on the xcolor package, which needs to be loaded with the table option. Since so many other packages depend on the xcolor package and this style file is loaded at the very end of the preamble, there would either be a great chance of an option clash, or the option would have to be passed to the xcolor package before the preamble from the body of the fithesis3 class thus breaking the encapsulation. Naming the option table forces the option to be processed by the xcolor package as well and it is therefore an elegant solution to the problem at hand.

\thesis@blocks@tables

- lot, nolot – \listoftables is or isn't going to be included in the \thesis@blocks@tables block, respectively.

\thesis@blocks@tables

- lof, nolof – \listoffigures is or isn't going to be included in the \thesis@blocks@tables block, respectively.

\thesis@blocks@cover

- cover, nocover – The \thesis@blocks@cover is or isn't going to expand to the thesis cover.

\ifthesis@cover@

  The \ifthesis@cover@ conditional is set to false or true, respectively. This value can be tested in the subsequently loaded style files.

The file loads the following packages:

- xcolor – Adds support for color manipulation.
- ifxetex – Used to detect the XeTeX engine.
- ifluatex – Used to detect the LuaTeX engine.
- graphix – Adds support for the inclusion of graphics files.
- pdfpages – Adds support for the injection of PDF documents into the resulting document, namely the thesis assignment.
- hyperref – Adds support for injecting metadata into the resulting PDF document.
- keyval – Adds support for parsing comma-delimited lists of key-value pairs.

```
\thesis@require{xcolor}
\thesis@require{graphicx}
\thesis@require{pdfpages}
\thesis@require{keyval}
\thesis@require{ifxetex}
\thesis@require{ifluatex}
```

`\ifthesis@xeluatex` Using the `\ifxetex` and `\ifluatex` conditionals, a compound `\ifthesis@xeluatex` conditional was constructed. This conditional can be used by subsequently loaded style files to test,whether either the XeTeX or the LuaTeX engine is being used.

```
{\let\x\expandafter
\x\global\x\let\x\ifthesis@xeluatex\csname if%
  \ifxetex true\else
    \ifluatex\x\x\x t\x\x\x r\x\x\x u\x\x\x e%
    \else   f\x\x\x a\x\x\x l\x\x\x s\x\x\x e%
    \fi
  \fi\endcsname}
```

The following packages get only loaded, when the document is being typeset using the XeTeX or LuaTeX engine:

- fontspec – Allows the selection of system-installed fonts.
- unicode-math – Allows the selection of system-installed mathematical fonts.

Under XeTeX, the TeX Gyre Pagella and TeX Gyre Pagella Math are also selected as the main text and math fonts.

```
\ifthesis@xeluatex
  \ifthesis@palatino@
    \thesis@require{fontspec}
    \thesis@require{unicode-math}
    \setmainfont[Ligatures=TeX]{TeX Gyre Pagella}
    \setmathfont[math-style=ISO,bold-style=ISO,vargreek-shape=TeX]%
      {TG Pagella Math}
  \fi
```

The following packages get only loaded, when the document is not being typeset using the XeTeX engine and the `\ifthesis@palatino@` conditional is `true`:

- cmap – Places an an explicit `ToUnicode` map in the resulting PDF file, allowing for extraction of the text of the document.
- mathpazo – The virtual `mathpazo` fonts will be used for math.
- tgpagella – Changes the default roman font family to TeX Gyre Pagella.
- lmodern – Changes the default sans-serif and monotype font faces to Latin Modern instead of the default Computer Modern font family.
- fontenc – The font encoding is set to Cork.

```
\else
  \ifthesis@palatino@
    \RequirePackage[resetfonts]{cmap}
    \thesis@require{lmodern}
    \thesis@require{mathpazo}
    \thesis@require{tgpagella}
    \RequirePackage[T1]{fontenc}
  \fi
\fi
```

If the `\thesis@newtable@` and `\thesis@color@` conditionals are `true`, then the following package gets loaded:

- tabularx – Provides the `tabularx` environment, which enables the typesetting of tables with variable-width columns.

Subsequently, the `tabular` and `tabularx` environments are redefined to better match the style of the given faculty.

The `\thesis@newtable@old` and `\endthesis@newtable@old` macros containing the original definition of the `tabular` environment are always defined and are available for subsequently loaded styles in case the typesetting of unaltered tables is required.

```
\let\thesis@newtable@old\tabular
\let\endthesis@newtable@old\endtabular
\ifthesis@newtable@\ifthesis@color@
  \thesis@require{tabularx}
  \thesis@require{booktabs}

  % Adjust the measurements
  \setlength{\aboverulesep}{0pt}
  \setlength{\belowrulesep}{0pt}
  \setlength{\extrarowheight}{.75ex}
\fi\fi
```

The hyperref package is configured to support both roman and arabic page numbering in one document and to decorate hyperlinks with an underline instead of a rectangular box.

```
\thesis@require{hyperref}
\hypersetup{
  pdfborderstyle={/S/U/W 1}, % Less obtrusive borders
  plainpages=false,          % Multiple page numbering support
  pdfpagelabels              % Generate pdf page labels
}
```

`\thesis@color@setup` The file defines the `\thesis@color@setup{`⟨*colors*⟩`}` command, where *colors* is a comma-delimited list of key-value pairs as defined by the keyval package. The command can be invoked either by the subsequently loaded style files or by the user to define which colors will be used, when the `color` option is specified.

```
\def\thesis@color@setup#1{%
```

```
\setkeys{thesis@color}{#1}}
```

The following key-value pairs are supported:

1. {⟨links=*color*⟩} – Sets the color of hyperref links to *color* and stores it under the name thesis@color@links. The default color of links is specified by the hyperref package.
2. {⟨tableOdd=*color*⟩} – Stores the color of the odd rows of the redefined tabular and tabularx environments under the name thesis@color@tableOdd.
3. {⟨tableEven=*color*⟩} – Stores the color of the even rows of the redefined tabular and tabularx environments under the name thesis@color@tableEven.
4. {⟨tableEmph=*color*⟩} – Stores the color of an emphasized cell in the table for usage by the user under the name thesis@color@tableEmph.

```
\define@key{thesis@color}{links}{%
  \definecolor{thesis@color@links}#1
  \hypersetup{linkbordercolor=thesis@color@links}}
\define@key{thesis@color}{tableOdd}{%

```

The file defines several blocks to be used in the redefinitions of the \thesis@preamble and \thesis@postable private macros by the subsequently loaded style files.

\thesis@blocks@frontMatter The \thesis@blocks@frontMatter private macro sets up the style of the front matter of the thesis.

```

\thesis@blocks@clear The \thesis@blocks@clear private macro clears the current page along with the next left-handed (even-numbered) page, when double-sided typesetting is enabled.

```
\def\thesis@blocks@clear{%

```

s@blocks@facultyLogo@monochrome The \thesis@blocks@facultyLogo@monochrome[⟨*options*⟩] private macro typesets the \thesis@logopath\thesis@facultyLogo logo with the given *options* passed to \includegraphics.

```
\newcommand{\thesis@blocks@facultyLogo@monochrome}[1]%
  [width=40mm]{{%
    \edef\@path{\thesis@logopath\thesis@facultyLogo}%

thesis@blocks@facultyLogo@color The \thesis@blocks@facultyLogo@color[⟨*options*⟩] private macro typesets either the \thesis@logopath\thesis@facultyLogo logo, if the \ifthesis@color@ conditional is false or the \thesis@logopath color/\thesis@facultyLogo logo otherwise with the given *options* passed to \includegraphics.

esis@blocks@universityLogo@color The \thesis@blocks@universityLogo@color[⟨*options*⟩] private macro typesets either the \thesis@logopath\thesis@universityLogo logo, if the \ifthesis@color@ conditional is false or the \thesis@logopath color/\thesis@universityLogo logo otherwise with the given *options* passed to \includegraphics.

\thesis@blocks@cover The \thesis@blocks@cover private macro typesets the thesis cover. It is composed of three private macros:

\thesis@blocks@cover@header
- \thesis@blocks@cover@header – The header of the cover page

\thesis@blocks@cover@content
- \thesis@blocks@cover@content – The content of the cover page

\thesis@blocks@cover@footer
- \thesis@blocks@cover@footer – The footer of the cover page

This allows the subsequently loaded style files to only redefine certain parts of the cover page.

```

The output of the \thesis@blocks@cover@header private macro is controlled by the following conditionals:

1. \ifthesis@blocks@cover@university@ – This conditional expression determines, whether the university name is going to be included in the header of the cover. The default value of this conditional is true.

2. \ifthesis@blocks@cover@faculty@ – This conditional expression determines, whether the faculty name is going to be included in the header of the cover. The default value of this conditional is true.

3. \ifthesis@blocks@cover@department@ – This conditional expression determines, whether the department name is going to be included in the header of the cover. The default value of this conditional is false.

4. \ifthesis@blocks@cover@field@ – This conditional expression determines, whether the field of study is going to be included in the header of the cover. The default value of this conditional is false.

The sebsequently loaded style files can alter the value of these conditionals to alter the output of the `\thesis@blocks@cover@header` private macro without altering its definition.

`\thesis@blocks@assignment` The `\thesis@blocks@assignment` private macro either:

- Typesets a placeholder page to be replaced with the official thesis assignment, when `\thesis@assignmentPDF` is undefined and the `\ifthesis@blocks@assignment@` conditional is `true`.

3.6.2.5 The `style/mu/fit12.clo` file

This file is conditionally loaded by the `style/mu/base.sty` file to redefine the page geometry to match the type size of 12 points. The type dimensions defined by the file are stored in the following private macros as well:

- `\thesis@titlePage@normalsize` – Equivalent to `\normalsize`
- `\thesis@titlePage@small` – Equivalent to `\small`
- `\thesis@titlePage@footnotesize` – Equivalent to `\footnotesize`
- `\thesis@titlePage@scriptsize` – Equivalent to `\scriptsize`
- `\thesis@titlePage@tiny` – Equivalent to `\tiny`
- `\thesis@titlePage@large` – Equivalent to `\large`
- `\thesis@titlePage@Large` – Equivalent to `\Large`
- `\thesis@titlePage@LARGE` – Equivalent to `\LARGE`
- `\thesis@titlePage@huge` – Equivalent to `\huge`
- `\thesis@titlePage@Huge` – Equivalent to `\Huge`

These private macros can be used to typeset elements, whose size should remain constant regardless of the font size setting.

3.6.3 The style files of the Faculty of Informatics

3.6.3.1 The `style/mu/fithesis3-fi.sty` file

This is the style file for the theses written at the Faculty of Informatics at the Masaryk University in Brno. It has been prepared in accordance with the formal requirements published at the website of the faculty[1].

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis3/style/mu/fithesis3-fi}[2015/05/02]
```

The file defines the color used with the hyperlinks.

```
\thesis@color@setup{
  links={HTML}{FFD451},
  tableEmph={HTML}{FFD451},
  tableOdd={HTML}{FFF9E5},
  tableEven={HTML}{FFECB3}}
```

In case of rigorous and doctoral theses, the style file hides the thesis assignment in accordance with the formal requirements of the faculty.

```
\ifx\thesis@type\thesis@bachelors\else
\ifx\thesis@type\thesis@masters\else
  \thesis@blocks@assignment@false
\fi\fi
```

`\thesis@blocks@titlePage`

The style file redefines the cover and title page footers to include the thesis advisor's name and signature in case of a rigorous thesis. Along with the macros required by the locale file interface, the locale files need to define the following private macros:

`\thesis@advisorSignature`

- `\thesis@advisorSignature` – The label of the advisor signature field typeset in the case of a rigorous thesis

```
\def\thesis@blocks@titlePage@content{%
   {\thesis@titlePage@Huge\bf\thesis@TeXtitle\par\vfil}\vskip 0.8in
   {\thesis@titlePage@large\sc\thesis@@{typeName}\\[0.3in]}
   {\thesis@titlePage@Large\bf\thesis@author}
   % If this is a rigorous thesis, typeset the name of the
   % thesis advisor.
   \ifx\thesis@type\thesis@rigorous%
     {\thesis@titlePage@large\\[0.3in]
       {\bf\thesis@@{advisorTitle}:} \thesis@advisor}
   \fi}%
\def\thesis@blocks@titlePage@footer{%
  {\thesis@titlePage@large\thesis@place, \thesis@@{semester}
  % If this is a rigorous thesis, create space for the advisor's
  % signature
  \ifx\thesis@type\thesis@rigorous%
    \let\@A\relax\newlength{\@A}
      \settowidth{\@A}{\thesis@@{advisorSignature}}
```

[1] See http://www.fi.muni.cz/docs/BP_DP_na_FI.pdf

```
      \setlength{\@A}{\@A+1cm}
    \hfill\raisebox{-0.5em}{\parbox{\@A}{
      \centering
      \rule{\@A}{1pt}\\
      \thesis@@{advisorSignature}
    }}
  \fi}}
```

\thesis@blocks@declaration

The \thesis@blocks@declaration private macro typesets the declaration text. Compared to the definition within the style/mu/base.sty file, this private macro also typesets the advisor's name at the bottom of the page.

```
\def\thesis@blocks@declaration{%
  \thesis@blocks@clear%
  \begin{alwayssingle}%
    \chapter*{\thesis@@{declarationTitle}}%
    \thesis@declaration%
    \vskip 2cm%
    \hfill\thesis@author%
    \par\vfill%
    \textbf{\thesis@@{advisorTitle}:} \thesis@advisor%
    \par\vfil%
  \end{alwayssingle}}
```

The style file defines the autolayout preamble as the cover and the title page followed by the assignment, declaration, acknowledgement, abstract, keywords, table of contents and list of tables and figures as a part of the front matter. All blocks beside \thesis@titlePage are defined in the style/mu/base.sty file.

```

3.6.4 The style files of the Faculty of Science

3.6.4.1 The style/mu/fithesis3-sci.sty file

This is the style file for the theses written at the Faculty of Science at the Masaryk University in Brno. It has been prepared in accordance with the formal requirements published at the website of the faculty[2].

[2] See http://www.sci.muni.cz/NW/predpisy/od/OD-2014-05.pdf

```
\NeedsTeXFormat{LaTeX2e}
\ProvidesPackage{fithesis3/style/mu/fithesis3-sci}[2015/05/30]
```

The file defines the color used with the hyperlinks.

```
\thesis@color@setup{
  links={HTML}{20E366},
  tableEmph={HTML}{8EDEAA},
  tableOdd={HTML}{EDF7F1},
  tableEven={HTML}{CCEDD8}}
```

In addition to the main locale, the file also requires the Czech and English locales.

```
\thesis@requireLocale{czech}
\thesis@requireLocale{english}
```

The file loads the following packages:

- tikz – Used for dimension arithmetic.
- geometry – Used for the modifications of the type area dimensions.

```
\thesis@require{tikz}
\thesis@require{changepage}
```

In case of rigorous and doctoral theses, the style file hides the thesis assignment in accordance with the formal requirements of the faculty.

```

In addition to the main locale, the file also requires the English locale.

```

The file loads the following packages:

- tikz – Used for dimension arithmetic.

In addition to this, the type area width is set to 16 cm in accordance with the formal requirements of the faculty. This leads to overfull lines and is against the good conscience of the author of this style.
