Abstract

This document describes the design and implementation of the fithesis3 document class. It contains technical information for anyone who wishes to extend the class with their locale files or style files. Users who only wish to use the class are advised to consult the guides within the `guide/` directory, which only document the parts of the public API that are relevant to the given style files.

1 Required classes and packages

The class loads the `rapport3` base class and the following packages:

- `keyval` – Adds support for parsing comma-delimited lists of key-value pairs.
- `etoolbox` – Adds support for expanding code after the preamble.
- `ifxetex` – Used to detect the \XeTeX engine.
- `ifluatex` – Used to detect the \LuaTeX engine.
- `inputenc` – Used to enable the input utf-8 encoding. This package does not get loaded under \XeTeX and \LuaTeX .

The `hyperref` package is also conditionally loaded during the expansion of the `\thesis@load` macro (see section 3.1). Other packages may be required by the style files (see section 3.6) you are using.

```

1 \ProvidesClass{fithesis3}[\thesis@version]
2 \LoadClass[a4paper]{rapport3}
3 \RequirePackage{keyval}
4 \RequirePackage{etoolbox}
5 \RequirePackage{ifxetex}
6 \RequirePackage{ifluatex}
7 \ifxetex\else\ifluatex\else
8   \RequirePackage[utf8]{inputenc}
9 \fi\fi

```

2 Public API

2.1 Options

Any [*options*] passed to the class will be handed down to the loaded style files. The supported options are therefore documented in the subsection of section 3.6 dedicated to the respective style files.

2.2 The `\thesissetup` macro

`\thesissetup` The main public macro is the `\thesissetup{<keyvals>}` command, where *keyvals* is a comma-delimited list of key-value pairs as defined by the `keyval` package. This macro needs to be included prior to the beginning of a \LaTeX document. When used, the *keyvals* are processed.

Note that the values specified to the `\thesissetup` public macro may only contain one paragraph of text. If you wish to set multiple paragraphs of text as the value, you need to use the `\thesislong` public macro.

```

10 \def\thesissetup#1{%
11   \setkeys{thesis}{#1}}

```

2.2.1 The basepath key

`\thesis@basepath` The `{\basepath=path}` pair sets the *path* containing the class files. The *path* is prepended to each other path (`\thesis@logopath`, `\thesis@stylepath` and `\thesis@localepath`) used by the class. If non-empty, the *path* gets normalized to *path/*. The normalized *path* is stored within the private `\thesis@basepath` macro, whose implicit value is `fithesis3/`.

```

12 \def\thesis@basepath{fithesis3/}
13 \define@key{thesis}{basepath}{%
14   \ifx\@empty#1\@empty%
15     \def\thesis@basepath{}%
16   \else%
17     \def\thesis@basepath{#1/%}%
18   \fi}

```

`\thesis@logopath` 2.2.2 The logopath key

The `{\logopath=path}` pair sets the *path* containing the logo files, which is used by the style files loading the logo. If the *path* doesn't begin with a slash (/), the *path* is normalized via the private `\thesis@subdir` macro and stored within the private `\thesis@logopath` macro, whose implicit value is `\thesis@basepath` followed by `logo/\thesis@university/`. By default, this expands to `fithesis3/logo/mu/`.

```

19 \def\thesis@logopath{\thesis@basepath logo/\thesis@university/}
20 \define@key{thesis}{logopath}{%
21   \def\thesis@logopath{\thesis@subdir#1\relax}}

```

`\thesis@subdir` The `\thesis@subdir` private macro expands to the concatenation of the `\thesis@basepath` private macro with #1, if the first token of #1 isn't a slash character (/), or to #1 otherwise.

```

22 \def\thesis@subdir#1#2\relax{%
23   \ifx\@empty#1\@empty%
24     \thesis@basepath%
25   \else%
26     \if#1/%
27       #1#2/%
28     \else%
29       \thesis@basepath#1#2/%
30     \fi%
31   \fi}

```

`\thesis@stylepath` 2.2.3 The stylepath key

The `{\stylepath=path}` pair sets the *path* containing the style files. If the *path* doesn't begin with a slash (/), it is normalized to `\thesis@basepath` followed by

path. The normalized *path* is stored within the private `\thesis@stylepath` macro, whose implicit value is `\thesis@basepath style/`. By default, this expands to `fithesis3/style/`.

```
32 \def\thesis@stylepath{\thesis@basepath style/}
33 \define@key{thesis}{stylepath}{%
34   \def\thesis@stylepath{\thesis@subdir#1\relax}}
```

`\thesis@localepath` 2.2.4 The localepath key

The `{\localepath=path}` pair sets the *path* containing the locale files. If the *path* doesn't begin with a slash (/), it is normalized to `\thesis@basepath` followed by *path*. The normalized *path* is stored within the private `\thesis@localepath` macro, whose implicit value is `\thesis@basepath` followed by `locale/`. By default, this expands to `fithesis3/locale/`.

```
35 \def\thesis@localepath{\thesis@basepath locale/}
36 \define@key{thesis}{localepath}{%
37   \def\thesis@localepath{\thesis@subdir#1\relax}}
```

`\thesis@def` The `\thesis@def[key]{name}` private macro defines the private `\thesis@name` macro to expand to either «*key*», if specified, or to «*name*». The macro serves to provide the placeholder string for user-defined macros with no default value.

```
38 \newcommand{\thesis@def}[2][{}]{%
39   \expandafter\def\csname thesis@#2\endcsname{%
40     <<\ifx\@empty#1\@empty#2\else#1\fi>>}}
```

`\thesis@declaration` 2.2.5 The declaration key

The `{\declaration=text}` pair sets the declaration *text* to be included into the document. `\thesis@basepath` followed by *path*. The *text* is stored within the private `\thesis@declaration` macro, whose implicit value is `\thesis@@{declaration}`.

```
41 \def\thesis@declaration{\thesis@@{declaration}}
42 \long\def\KV@thesis@declaration#1{%
43   \long\def\thesis@declaration{#1}}
```

`\ifthesis@woman` 2.2.6 The gender key

The `{\gender=char}` pair sets the author's gender to either a male, if *char* is the character `m`, or to a female. The gender can be tested using the `\ifthesis@woman ... \else ... \fi` conditional. The implicit gender is male.

```
44 \newif\ifthesis@woman\thesis@womanfalse
45 \define@key{thesis}{gender}{%
46   \def\thesis@male{m}%
47   \def\thesis@arg{#1}%
48   \ifx\thesis@male\thesis@arg%
49     \thesis@womanfalse%
```

```

50 \else%
51 \thesis@womantrue%
52 \fi}

```

\thesis@author 2.2.7 The author key

The `{\author=name}}` pair sets the author's full name to *name*. The *name* is parsed using the private macro and stored within the following private macros:

- \thesis@author • \thesis@author – The full name of the author.
- \thesis@author@head • \thesis@author@head – The first space-delimited part of the name. This corresponds to the author's first name.
- \thesis@author@tail • \thesis@author@tail – The full name without the first space-delimited part of the name. This corresponds to the author's surname.

```

53 \def\thesis@parseAuthor#1{%
54 \def\thesis@author{#1}%
55 \def\thesis@author@head{\expandafter\expandafter\expandafter%
56 \@@gobble\thesis@head#1 \relax}%
57 \def\thesis@author@tail{\thesis@tail#1 \relax}}
58 \thesis@def{author}%
59 \thesis@def[author]{author@head}%
60 \thesis@def[author]{author@tail}%
61 \define@key{thesis}{author}{%
62 \thesis@parseAuthor{#1}}

```

\thesis@id 2.2.8 The id key

The `{\id=identifier}}` pair sets the identifier of the thesis author to *identifier*. This usually corresponds to a unique identifier of the author within the information system of the given university.

```

63 \thesis@def{id}
64 \define@key{thesis}{id}{%
65 \def\thesis@id{#1}}

```

\thesis@type 2.2.9 The type key

The `{\type=type}}` pair sets the type of the thesis to *type*. The following types of theses are recognized:

The thesis type	The value of <i>type</i>
Bachelor's thesis	bc
Master's thesis	mgr
Doctoral thesis	d
Rigorous thesis	r

The *type* is stored within the private `\thesis@type` macro, whose implicit value is `bc`. For the ease of testing of the thesis type via `\ifx` conditions within style and locale files, the `\thesis@bachelors`, `\thesis@masters`, `\thesis@doctoral` and `\thesis@rigorous` macros containing the corresponding *type* values are available as a part of the private API.

```

\thesis@bachelors 66 \def\thesis@bachelors{bc}
\thesis@masters   67 \def\thesis@masters{mgr}
\thesis@doctoral  68 \def\thesis@doctoral{d}
\thesis@rigorous  69 \def\thesis@rigorous{r}
                  70 \let\thesis@type\thesis@bachelors
                  71 \define@key{thesis}{type}{%
                  72   \def\thesis@type{#1}}

```

`\thesis@university` 2.2.10 The university key

The `{(university=id)}` pair sets the identifier of the university, at which the thesis is being written, to *id*. The *id* is stored within the private `\thesis@university` macro, whose implicit value is `mu`. The `\thesis@university` macro is used by the `\thesis@logopath` macro and when loading the style and locale files using the `\thesis@load` macro. It allows for the usage of the class at universities other than the Masaryk University in Brno without the need to alter the code.

```

73 \def\thesis@university{mu}
74 \define@key{thesis}{university}{%
75   \def\thesis@university{#1}}

```

`\thesis@faculty` 2.2.11 The faculty key

The `{\style=filename}` pair sets the filename of the style file to be used to *filename*. The *filename* is stored within the private `\thesis@style` macro, whose implicit value is `\thesis@university/fithesis3-\thesis@faculty`. The style file is loaded from the `\thesis@stylepath` `\thesis@style` path.

```
103 \def\thesis@style{\thesis@university/fithesis3-\thesis@faculty}
104 \define@key{thesis}{style}{%
105   \def\thesis@style{#1}}
```

`\thesis@style@inheritance` 2.2.21 The `styleInheritance` key

The `{\styleInheritance=bool}` pair either enables, if *bool* is true or unspecified, or disables the inheritance for style files. The effects of the inheritance are documented within the subsection documenting the `\thesis@load` macro. The setting can be tested using the `\ifthesis@style@inheritance ... \else ... \fi` conditional. Inheritance is enabled for style files by default.

```

106 \newif\ifthesis@style@inheritance\thesis@style@inheritancetrue
107 \define@key{thesis}{styleInheritance}[true]{%
108   \def\@true{true}%
109   \def\@arg{#1}%

114   \fi}

```

`\thesis@locale` 2.2.22 The locale key

The `{\locale=filename}` pair sets the filename of the locale file(s) to be used to *filename*. The *filename* is stored within the private `\thesis@locale` macro, whose implicit value is the main language of either the babel or the polyglossia package, or english, when undefined. If the inheritance is disabled for locale files, the locale file is loaded from the `\thesis@localepath\thesis@locale` path.

```

115 \def\thesis@locale{%
116   % Babel detection
117   \ifx\language\undefined%
118     english\else\language\fi}
119 \define@key{thesis}{locale}{%
120   \def\thesis@locale{#1}}

```

`\ifthesis@english` The English locale is special. Several parts of the document will typically be typeset in both the current locale and English. However, if the current locale is English, this would result in duplicity. To avoid this, the `\ifthesis@english ... \else ... \fi` conditional is made available for testing, whether or not the current locale is English.

```

121 \def\ifthesis@english{
122   \expandafter\def\expandafter\@english\expandafter{\string%
123     \english}%
124   \expandafter\expandafter\expandafter\def\expandafter%

128     \@english%
129     true%
130   \else%
131     false%
132   \fi\endcsname}

```

`\thesis@locale@inheritance` 2.2.23 The localeInheritance key

The `{\localeInheritance=bool}` pair either enables, if *bool* is true or unspecified, or disables the inheritance. The effects of the inheritance are documented within the subsection documenting the `\thesis@load` macro. The setting can be

tested using the `\ifthesis@locale@inheritance... \else ... \fi` conditional. Inheritance is enabled for locale files by default.

```

133 \newif\ifthesis@locale@inheritance\thesis@locale@inheritancetrue
134 \define@key{thesis}[localeInheritance][true]{%
135   \def\@true{true}%
136   \def\@arg{#1}%
137   \ifx\@true\@arg%
138     \thesis@locale@inheritancetrue%
139   \else%
140     \thesis@locale@inheritancefalse%
141   \fi}

```

2.2.24 The date key

The `{(date=date)}` pair sets the date of the thesis defence to *date*, where *date* is a string in the YYYY/MM/DD format, where YYYY stands for full year, MM stands for month and DD stands for day. The *date* is parsed and stored using the

`\thesis@parseDate` private macro within the following private macros:

<code>\thesis@date</code>	• <code>\thesis@date</code> – The whole date

`\thesis@assignmentFiles` 2.2.38 The assignment key

The `{\assignment=list}` pair sets the comma-separated list of paths (and optional page specifiers, see the `pdfpages` package `\includepdfmerge` command documentation) to the pdf files containing the thesis assignment to *list*. The *list* is stored within the `\thesis@assignmentFiles` private macro. When defined, the PDF files are injected into the resulting document instead of the placeholder `\thesis@{assignment}` string.

```
206 \define@key{thesis}{assignment}{%
207   \def\thesis@assignmentFiles{#1}}
```

`\ifthesis@auto` 2.2.39 The autoLayout key

The `{\autoLayout=bool}` pair either enables, if *bool* is true or unspecified, or disables autolayout. Autolayout injects the `\thesis@preamble` and `\thesis@postamble` private macros at the beginning and the end of the document, respectively. The setting can be tested using the `\ifthesis@auto ... \else ... \fi` conditional. The autolayout is enabled by default.

```
208 \newif\ifthesis@auto\thesis@autotru
209 \define@key{thesis}{autoLayout}[true]{%
210   \def\@true{true}%
211   \def\@arg{#1}%

213     \thesis@autotru
214   \else%
215     \thesis@autofalse%
216   \fi}
```

`\thesis@preamble` The `\thesis@postamble` and `\thesis@preamble` private macros are defined as empty strings by default and are subject to redefinition by the style files.

```
217 \def\thesis@preamble{}
218 \def\thesis@postamble{}
```

2.3 The `\thesislong` macro

`\thesislong` The public macro `\thesislong{<key>}{<value>}`, where *value* may contain multiple paragraphs of text, can be used for the following *keys* as an alternative to the `\thesissetup` public macro, which only permits a single paragraph as the *value*:

- abstract
- abstractEn
- thanks
- declaration

```
219 \long\def\thesislong#1#2{%
220   \csname KV@thesis@#1\endcsname{#2}}
```

3 Private API

3.1 Main routine

`\thesis@load` The `\thesis@load` macro is responsible for preparing the environment for, and consequently loading, the necessary locale and style files. By default, the `\thesis@load` macro gets expanded at the end of the preamble, but it can be inserted manually prior to that, if necessary to prevent package clashes. The `\ifthesis@loaded` semaphore ensures that the expansion is only performed once.

```
221 \newif\ifthesis@loaded\thesis@loadedfalse
222 \AtEndPreamble{\thesis@load}
223 \def\thesis@load{%
224   \ifthesis@loaded\else%
225     \thesis@loadedtrue
226     \makeatletter%
```

First, the main locale file is loaded using the `\thesis@requireLocale` macro.

```
227   % Load the main locale file
228   \thesis@requireLocale{\thesis@locale}
```

Consequently, the style files are loaded with the class options passed onto them. If inheritance is enabled for style files, then each of the following files is loaded in sequence, if they exist:

1. `\thesis@stylepath fithesis3-base.sty`
2. `\thesis@stylepath\thesis@university/fithesis3-base.sty`
3. `\thesis@stylepath\thesis@style.sty`

If inheritance is disabled for style files, then only the `\thesis@stylepath\thesis@style.sty` file is loaded. The `fithesis3-` prefix serves to prevent package clashes with other similarly named package files within the \TeX directory structure.

```
229   \ifthesis@style@inheritance
230     \thesis@requireStyle{\thesis@stylepath fithesis3-base}
231     \thesis@requireStyle{\thesis@stylepath\thesis@university%
232       /fithesis3-base}
233   \fi
234   \thesis@requireStyle{\thesis@stylepath\thesis@style}
```

With the placeholder strings loaded from the locale files, we can now inject meta-data into the resulting PDF file. To this end, the `hyperref` package is conditionally included with the `unicode` option. Consequently, the following values are assigned to the PDF headers:

- Title is set to `\thesis@title`.
- Author is set to `\thesis@author`.
- Keywords is set to `\thesis@keywords`.
- Creator is set to `2015/05/09 v0.3.10 fithesis3 MU thesis class`.

```

235     \thesis@require{hyperref}%
236     {\hypersetup{unicode,
237         pdftitle={\thesis@title},%
238         pdfauthor={\thesis@author},%
239         pdfkeywords={\thesis@keywords},%
240         pdfcreator={\thesis@version},%
241     }}%

```

If autolayout is enabled, the `\thesis@preamble` and `\thesis@postamble` macros are scheduled for expansion at the beginning and at the end of the document, respectively.

```

242     \ifthesis@auto%
243         \AtBeginDocument{\thesis@preamble}%
244         \AtEndDocument{\thesis@postamble}%
245     \fi%

```

Lastly, a B_WT_EX file named `\jobname.bib` containing the bibliographical entry for the thesis is scheduled to be generated at the end of the document in the working directory using the `\thesis@bibgen` macro and the `\thesis@pages` private macro definition containing the length of the document is scheduled to be included in the auxiliary file.

```

246     \AtEndDocument{%
247         % Define \thesis@pages for the next run
248         \write\@auxout{\noexpand\gdef\noexpand%
249             \thesis@pages{\thepage}}%
250     \makeatother%
251     \fi}

```

3.2 File manipulation macros

`\thesis@exists` The `\thesis@exists{<file>}{<tokens>}` private macro is used to test for the existence of a given *file*. If the *file* exists, the macro expands to *tokens*. Otherwise, a class warning is written to the output.

```

252 \def\thesis@input#1{%
253     \thesis@exists{#1}{\input{#1}}

```

`\thesis@input` The `\thesis@input{<file>}` private macro inputs the given *file*, if it exists.

```

254 \def\thesis@exists#1#2{%
255     \IfFileExists{#1}{#2}{%
256         \ClassWarning{fithesis3}{File #1 doesn't exist}}

```

`\thesis@require` The `\thesis@require{<package>}` expands to `\RequirePackage{<package>}`, if the specified *package* has not yet been loaded. This generally serves to prevent options clashes, when the options with which the package had been loaded are of no consequence.

```

257 \def\thesis@require#1{%
258     \ifpackageloaded{#1}{}{\RequirePackage{#1}}

```

`\thesis@requireStyle` The `\thesis@requireStyle{<package>}` expands to `\RequirePackageWithOptions{<package>}`, if the specified *package* exists and has not yet been loaded. This generally serves to load style files.

```

259 \def\thesis@requireStyle#1{\thesis@exists{#1.sty}{%
260   \ifpackageloaded{#1}{\RequirePackageWithOptions{#1}}}}
```

`\thesis@requireLocale` The `\thesis@requireLocale{<locale>}` private macro loads locale files of the specified *locale*, if they haven't been loaded before. If inheritance is enabled for locale files, then the following directories are used:

1. `\thesis@localepath`
2. `\thesis@localepath\thesis@university/`
3. `\thesis@localepath\thesis@university/\thesis@faculty/`

If inheritance is disabled for locale files, then only the `\thesis@localepath` directory is used. The macro can be used within both locale and style files, although the usage within locale files is strongly discouraged to prevent circular dependencies.

```

261 \def\thesis@requireLocale#1{%
262   % Prevent redundant entries
263   \expandafter\ifx\csname thesis@#1@required\endcsname\relax%
264     \expandafter\def\csname thesis@#1@required\endcsname{%}%
265     \thesis@input{\thesis@localepath#1.def}
266     \ifthesis@locale@inheritance%
267       \thesis@input{\thesis@localepath\thesis@university/#1.def}%
268       \thesis@input{\thesis@localepath\thesis@university/%
269         \thesis@faculty/#1.def}%
270     \fi%
271   \fi}
```

3.3 String manipulation macros

`\thesis@` The `\thesis@{<name>}` macro expands to `\thesis@ name`, where *name* gets fully expanded and can therefore contain active characters and command sequences.

```

272 \def\thesis@#1{\csname thesis@#1\endcsname}
```

`\thesis@@` The `\thesis@@{<name>}` macro expands to `\thesis@ locale@name`, where *locale* corresponds to the name of the current locale. *name* gets fully expanded and can therefore contain active characters and command sequences.

```

273 \def\thesis@@#1{\thesis@\thesis@locale @#1}}
```

`\thesis@lower` The `\thesis@lower` and `\thesis@upper` private macros are used for upper- and lowercasing within locale files. To cast the `\thesis@name` macro to the lower- or uppercase, `\thesis@lower{name}` or `\thesis@upper{name}` would be used, respectively. *name* gets fully expanded and can therefore contain active characters and command sequences.

```

274 \def\thesis@lower#1{{%

285 sis\#1\endcsname\endcsname}}
\thesis@@lower The \thesis@@lower and \thesis@@upper private macros are used for upper- and
\thesis@@upper lowercasing current locale strings within style files. To cast the \thesis@locale@name
macro to the lower- or uppercase, \thesis@@lower{name} or \thesis@@upper{name}
would be used, respectively. name gets fully expanded and can therefore contain
active characters and command sequences.
286 \def\thesis@@lower#1{\thesis@lower{\thesis@locale @#1}}
287 \def\thesis@@upper#1{\thesis@upper{\thesis@locale @#1}}
\thesis@head The \thesis@head and \thesis@tail private macros are used for retrieving a
\thesis@tail head or a tail of space-separated token sequences, which end with \relax.

3.4 General purpose macros

\thesis@pages The \thesis@pages macro is defined at the beginning of the second L^AT_EX run as a part of the main routine (see section 3.1). During the first run, the macro expands to ??.

```

301 \ifx\thesis@pages\undefined\def\thesis@pages{??}\fi

```

3.5 Locale files

Locale files contain macro definitions for various locales. They live in the locale/ subtree and they are loaded during the main routine (see section 3.1).

When creating a new locale file, it is advisable to create one self-contained dtx file, which is then partitioned into locale files via the docstrip tool based on the

`\file` respective ins file. A macro `\file{<filename>}` is available for the sectioning the documentation of various files within the dtx file. *filename*. For more information about dtx files and the docstrip tool, consult the dtxut, docstrip, doc and ltxdoc manuals.

3.5.1 Interface

The union of locale files named *locale.def*, where *locale* is the result of the expansion of `\thesis@locale`, loaded via main routine's inheritance scheme (see section 3.1) needs to define the following private macros:

- `\thesis@locale@universityName` – The name of the university
- `\thesis@locale@facultyName` – The name of the faculty
- `\thesis@locale@assignment` – Instructions to replace the current page with the official thesis assignment
- `\thesis@locale@declaration` – The declaration text
- `\thesis@locale@fieldTitle` – The title of the field of study entry
- `\thesis@locale@advisorTitle` – The title of the advisor
- `\thesis@locale@authorTitle` – The title of the author
- `\thesis@locale@abstractTitle` – The title of the abstract section
- `\thesis@locale@keywordsTitle` – The title of the keywords section
- `\thesis@locale@thanksTitle` – The title of the acknowledgement section
- `\thesis@locale@declarationTitle` – The title of the declaration section
- `\thesis@locale@idTitle` – The title of the thesis author's identifier field
- `\thesis@locale@winter` – The name of the winter semester
- `\thesis@locale@summer` – The name of the summer semester
- `\thesis@locale@semester` – The full name of the current semester
- `\thesis@locale@typeName` – The name of the thesis type

3.6 Style files

Style files define the structure and the look of the resulting document. They live in the `style/` subtree and they are loaded during the main routine (see section 3.1).

When creating a new style file, it is advisable to create one self-contained `dtx` file, which can contain several files to be extracted via the `docstrip` tool based on the respective `ins` file. A macro `\file{<filename>}` is available for sectioning the documentation of various files within the `dtx` file. For more information about `dtx` files and the `docstrip` tool, consult the `dtxtut`, `docstrip`, `doc` and `ltxdoc` manuals.

3.6.1 Interface

The union of style files loaded via main routine's inheritance scheme (see section 3.1) should define at least one of the following private macros:

<code>\thesis@preamble</code>	• <code>\thesis@preamble</code> – If autolayout is enabled, then this macro is expanded at the very beginning of the document.
<code>\thesis@postamble</code>	• <code>\thesis@postamble</code> – If autolayout is enabled, then this macro is expanded at the very end of the document.

3.6.2 Base style files

3.6.2.1 The style/fithesis3-base.sty file

If inheritance is enabled for style files, then this file is always the first style file to be loaded, regardless of the value of the `\thesis@style` macro. This style file is currently a dummy file.

```

758 \NeedsTeXFormat{LaTeX2e}
759 \ProvidesPackage{fithesis3/style/fithesis3-base}[2015/04/08]

```

3.6.2.2 The style/mu/fithesis3-base.sty file

This is the base style file for theses written at the Masaryk University in Brno. If inheritance is enabled for style files, then this file is always the second style file to be loaded right after style/base.sty, regardless of the value of the \thesis@style macro.

```
760 \ProvidesPackage{fithesis3/style/mu/fithesis3-base}[2015/04/12]
```

```
761 \NeedsTeXFormat{LaTeX2e}
```

The file recognizes the following options:

- 10pt, 11pt, 12pt – Sets the type size to 10, 11 or 12 points respectively, along with the page geometry. The default type size is 12 points.
- oneside, twoside – The document is going to be single- or double-sided. In a double-sided document headers, page numbering, margin notes and several other elements are rearranged based on the parity of the page. Blank pages are optionally inserted prior the beginning of the next chapter to ensure that it starts on an left-hand (even-numbered) page.

\ifthesis@twoside@

The \ifthesis@twoside@ conditional is set to false or true, respectively. This value can be tested in the subsequently loaded style files.

- onecolumn, twocolumn – The document is going to be set in a single column or in two columns, respectively.
- draft, final – Overfull lines are or aren't marked within the document, respectively.

\ifthesis@color@

- monochrome, color – Certain typographical elements are going to be typeset in color. The \ifthesis@color@ conditional is set to false or true, respectively. This value can be tested in the subsequently loaded style files.

\ifthesis@newtable@

- oldtable, table – If the \ifthesis@color@ conditional is true, then the definition of the tabular and tabularx commands aren't or are going to be altered, respectively, to better match the style. The \ifthesis@newtable@ conditional is set to false or true, respectively.

The choice of the name is deliberate – the redefinition of the table environments depends on the xcolor package, which needs to be loaded with the table option. Since so many other packages depend on the xcolor package and this style file is loaded at the very end of the preamble, there would either be a great chance of an option clash, or the option would have to be passed to the xcolor package from the body of the fithesis3 class thus breaking the encapsulation. Naming the option option forces the option to be processed by the xcolor package as well and it is therefore an elegant solution to the problem at hand.

\thesis@blocks@tables

- lot, nolot – \listoftables is or isn't going to be included in the \thesis@blocks@tables block, respectively.

<code>\thesis@blocks@tables</code>	<ul style="list-style-type: none"> • <code>lof, nolog</code> – <code>\listoffigures</code> is or isn't going to be included in the <code>\thesis@blocks@tables</code> block, respectively.
<code>\thesis@blocks@cover</code>	<ul style="list-style-type: none"> • <code>cover, nocover</code> – The <code>\thesis@blocks@cover</code> is or isn't going to expand to the thesis cover.
<code>\ifthesis@cover@</code>	The <code>\ifthesis@cover@</code> conditional is set to false or true, respectively. This value can be tested in the subsequently loaded style files.

The defaults are 12pt, twoside, final, monochrome, oldtable, nolog, nolot and nocover.

- `ifluatex` – Used to detect the \LuaTeX engine.
- `graphics` – Adds support for the inclusion of graphics files.

- `pdfpages` – Adds support for the injection of PDF documents into the resulting document, namely the thesis assignment.
- `hyperref` – Adds support for injecting metadata into the resulting PDF document.
- `keyval` – Adds support for parsing comma-delimited lists of key-value pairs.

The following packages get only loaded, when the document is being typeset using the \XeTeX or \LuaTeX engine:

- `fontspec` – Allows the selection of system-installed fonts.
- `unicode-math` – Allows the selection of system-installed mathematical fonts.

Under \XeTeX , the TeX Gyre Pagella and TeX Gyre Pagella Math are also selected as the main text and math fonts.

```

The following packages get only loaded, when the document is not being typeset using the \XeTeX engine:

- `mathpazo` – The virtual mathpazo fonts will be used for math.
- `tgpagella` – Changes the default roman font family to TeX Gyre Pagella.

- `lmodern` – Changes the default sans-serif and monotype font faces to Latin Modern instead of the default Computer Modern font family.
- `cmap` – Places an explicit ToUnicode map in the resulting PDF file, allowing for extraction of the text of the document.
- `fontenc` – The font encoding is set to Cork.

If the `\thesis@newtable@` and `\thesis@color@` conditionals are true, then the following package gets loaded:

- `tabularx` – Provides the `tabularx` environment, which enables the typesetting of tables with variable-width columns.

Subsequently, the `tabular` and `tabularx` environments are redefined to better match the style.

`\thesis@color@setup` The file defines the `\thesis@color@setup{<colors>}` command, where *colors* is a comma-delimited list of key-value pairs as defined by the `keyval` package. The command can be invoked either by the subsequently loaded style files or by the user to define which colors will be used, when the `color` option is specified.

The following key-value pairs are supported:

1. `{<links=color>}` – Sets the color of hyperref links to *color* and stores it under the name `thesis@color@links`. The default color of links is specified by the `hyperref` package.
2. `{<tableOdd=color>}` – Stores the color of the odd rows of the redefined `tabular` and `tabularx` environments under the name `thesis@color@tableOdd`.
3. `{<tableEven=color>}` – Stores the color of the even rows of the redefined `tabular` and `tabularx` environments under the name `thesis@color@tableEven`.
4. `{<tableEmph=color>}` – Stores the color of an emphasized cell in the table for usage by the user under the name `thesis@color@tableEmph`.

The file defines several blocks to be used in the redefinitions of the `\thesis@preamble` and `\thesis@postable` private macros by the subsequently loaded style files.

`\thesis@blocks@frontMatter` The `\thesis@blocks@frontMatter` private macro sets up the style of the front matter of the thesis.

`\thesis@blocks@clear` The `\thesis@blocks@clear` private macro clears the current page along with the next left-handed (even-numbered) page, when double-sided typesetting is enabled.

`\thesis@blocks@cover` The `\thesis@blocks@cover` private macro typesets the thesis cover. It is composed of three private macros:

- `\thesis@blocks@cover@content` • `\thesis@blocks@cover@content` – The content of the cover page

The output of the `\thesis@blocks@cover@header` private macro is controlled by the following conditional expressions:

1. `\ifthesis@blocks@cover@university@` – This conditional expression determines, whether the university name is going to be included in the header of the cover. The default value of this conditional expression is true.
2. `\ifthesis@blocks@cover@faculty@` – This conditional expression determines, whether the faculty name is going to be included in the header of the cover. The default value of this conditional expression is true.
3. `\ifthesis@blocks@cover@department@` – This conditional expression determines, whether the department name is going to be included in the header of the cover. The default value of this conditional expression is false.
4. `\ifthesis@blocks@cover@field@` – This conditional expression determines, whether the field of study is going to be included in the header of the cover. The default value of this conditional expression is false.

The subsequently loaded style files can alter the value of these expressions to alter the output of the `\thesis@blocks@cover@header` private macro without altering its definition.

The output of the `\thesis@blocks@titlePage@header` private macro is controlled by the following conditional expressions:

1. `\ifthesis@blocks@titlePage@university@` – This conditional expression determines, whether the university name is going to be included in the header of the title page. The default value of this conditional expression is true.
2. `\ifthesis@blocks@titlePage@faculty@` – This conditional expression determines, whether the faculty of study is going to be included in the header of the title page. The default value of this conditional expression is true.

3. `\ifthesis@blocks@titlePage@department@` – This conditional expression determines, whether the department name is going to be included in the header of the title page. The default value of this conditional expression is false.
4. `\ifthesis@blocks@titlePage@field@` – This conditional expression determines, whether the field of study is going to be included in the header of the title page. The default value of this conditional expression is false.

The subsequently loaded style files can alter the value of these expressions to alter the output of the `\thesis@blocks@titlePage@header` private macro without altering its definition.

3.6.2.5 The style/mu/fit12.clo file

This file is conditionally loaded by the style/mu/base.sty file to redefine the page geometry to match the type size of 12 points. The type dimensions defined by the file are stored in the following private macros as well:

- | | |
|------------------------------|--|
| \thesis@titlePage@normalsize | • \thesis@titlePage@normalsize – Equivalent to \normalsize |
| \thesis@titlePage@small | • \thesis@titlePage@small – Equivalent to \small |

<code>\thesis@titlePage@huge</code>	• <code>\thesis@titlePage@huge</code> – Equivalent to <code>\huge</code>
<code>\thesis@titlePage@Huge</code>	• <code>\thesis@titlePage@Huge</code> – Equivalent to <code>\Huge</code>

These private macros can be used to typeset elements, whose size should remain constant regardless of the font size setting.

3.6.3 The style files of the Faculty of Informatics

3.6.3.1 The style/mu/fithesis3-fi.sty file

This is the style file for the theses written at the Faculty of Informatics at the Masaryk University in Brno. It has been prepared in accordance with the formal requirements published at the website of the faculty¹.

```

1575 \NeedsTeXFormat{LaTeX2e}
1576 \ProvidesPackage{fithesis3/style/mu/fithesis3-fi}[2015/05/02]

The file defines the color used with the hyperlinks.

1581     tableEven={HTML}{FFECB3}}

```

`\thesis@blocks@titlePage` The style file redefines the cover and title page footers to include the thesis advisor's name and signature in case of a rigorous thesis. Along with the macros required by the locale file interface, the locale files need to define the following private macros:

`\thesis@advisorSignature`

- `\thesis@advisorSignature` – The label of the advisor signature field typeset in the case of a rigorous thesis

```

```

`\thesis@blocks@declaration` The `\thesis@blocks@declaration` private macro typesets the declaration text. Compared to the definition within the style/mu/base.sty file, this private macro also typesets the advisor's name at the bottom of the page.

The style file defines the autolayout preamble as the cover and the title page followed by the assignment, declaration, acknowledgement, abstract, keywords, table of contents and list of tables and figures as a part of the front matter. 3.6.4 The style files of the Faculty of Science

3.6.4.1 The style/mu/fithesis3-sci.sty file

This is the style file for the theses written at the Faculty of Science at the Masaryk University in Brno. It has been prepared in accordance with the formal requirements published at the website of the faculty².

```

The file loads the following packages:

```

The file loads the following packages:

- tikz – Used for dimension arithmetic.
- geometry – Allows for modifications of the type area dimensions.
- setspace – Allows for line height modifications.

In addition to this, the type area width is set to 16 cm in accordance with the formal requirements of the faculty. This leads to overfull lines and is against the good conscience of the author of this style.
